PHTLS: Prehospital Trauma Life Support, Military Edition consists of the PHTLS core content and features thirteen chapters written by military prehospital trauma care experts for practitioners in the military environment.
PHTLS: Prehospital Trauma Life Support, Military Edition is created in partnership between the National Association of Emergency Medical Technicians (NAEMT) and the Committee on Tactical Combat Casualty Care (C-TCCC). Since 1996, TCCC has improved the care rendered in combat prehospital environments. TCCC is the battlefield prehospital component of the Joint Trauma System, an organization within the United States Department of Defense that projects combat trauma care out to the point of injury and continues that care seamlessly while bringing the casualty home for recuperation and

rehabilitation. TCCC guidelines are continuously revised and updated by C-TCCC, an all-volunteer group of military medicine and trauma care specialists. The membership of C-TCCC includes combat medics, corpsmen, and paramedics as well as physicians and physician assistants.

Wild Rescues is a fast-paced, firsthand glimpse into the exciting lives of paramedics who work with the National Park Service: a unique brand of park rangers who respond to medical and traumatic emergencies in some of the most isolated and dangerous parts of America. In 2014, Kevin Grange left his job as a paramedic in Los Angeles to work in a response area with 2.2 million acres: Yellowstone National Park. Seeking a break from city life and urban EMS, he wanted to experience pure nature, fulfill his dream of working for the National Park Service, and take a crash-course in wilderness medicine. Between calls, Grange reflects upon the democratic ideal of the National Park mission, the beauty of the land, and the many threats facing it. With visitation rising, budgets shrinking, and people loving our parks to death, he realized that—along with the health of his patients—he was also fighting for the life of "America's Best Idea."

How I Saved Myself By Becoming an EMT Prentice Hall

The basis for the movie starring Kathy Bates, *Ambulance Girl* is an inspiring story by a woman who found, somewhat late in life, that “ in helping others I learned to help myself. ” Jane Stern was a walking encyclopedia of panic attacks, depression, and hypochondria. Her marriage of more than thirty years was suffering, and she was virtually immobilized by fear and anxiety. As the daughter of parents who both died before she was thirty, Stern was terrified of illness and death, and despite the fact that her acclaimed career as a food and travel writer required her to spend a great deal of time on airplanes, she suffered from a persistent fear of flying and severe claustrophobia. Yet, this fifty-two-year-old writer decided to become an emergency medical technician. Stern tells her story with great humor and poignancy, creating a wonderful portrait of a middle-aged, Woody Allen – ish woman who was “ deeply and neurotically terrified of sick and dead people, ” but who went out into the world to save other people ’ s lives as a way of saving her own. Her story begins with the boot camp of EMT training: 140 hours at the hands of a dour ex-marine who took delight in presenting a veritable parade of amputations, hideous deformities, and gross disasters. Jane—overweight and badly out of shape—had to surmount physical challenges like carrying a 250-pound man seated in a chair down a dark flight of stairs. After class she did rounds in the emergency room of a local hospital. Each call Stern describes is a vignette of human nature, often with a life in the balance. From an AIDS hospice to town drunks, yuppie wife beaters to psychopaths, Jane comes to see the true nature and underlying mysteries of a town she had called home for twenty years. Throughout the book we follow her as she gets her sea legs, bonds with the firefighters who become her colleagues, and eventually, comes to be known as *Ambulance Girl*.

Wild Rescues Jones & Bartlett Learning

It has, improbably, been called uncommonly lucid, even riveting by *The New York Times*, and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is *The 9/11 Commission Report*, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States—which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean—it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts—it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7—it is nevertheless an essential record of one of the most transformational events of modern times.

Three new chapters have been added to this edition: Community Paramedicine, Research and Quality, and Mechanical Ventilation. The first two represent areas of growth in the scope, role, and importance of paramedics in an integrated health care system. The third acknowledges the paramedics' ability to provide advanced therapies prior to arrival at the hospital, and a growing reliance on paramedics in transfer of critically ill

patients in a regionalized delivery of care. Clear Approach to Patient Assessment and Management The Seventh Edition teaches and reinforces the concept of patient assessment with a single, comprehensive chapter, ensuring that students understand patient assessment as a single, integrated process—the way that providers actually practice it in the field. Each clinical chapter reinforces the steps of the patient assessment process within the context of the illnesses or injuries discussed in the chapter. Strong Application to Real-World EMS Patient case studies evolve throughout every chapter, offering students a genuine context for the application of the knowledge presented. Perspectives & Practices for Professional Caregivers Jones & Bartlett Publishers

Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities
