Be Ready - A Guide for Developing Comprehensive Emergency Response Plans for Organizations Skyhorse

With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials. If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Does the identification number 60 indicate a toxic substance or a flammable solid, in

the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? Questions like these and more are answered in the 2018 update of the Emergency Response Guidebook. Learn how to identify symbols for vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger.

Comprehensive! Known as the Orange Book.

2004 Emergency Response Guidebook  
DIANE Publishing

"Move aside, panda ... Photographed here with affection and care, moon bears, also known as Asiatic black bears, rival their Chinese cousins in childlike appeal." --The New York Times Named 2013 Outstanding Science Trade Book for Students K-12 by the National Science Teachers Association and

the Children's Book Council "In the early spring, when the snow was still deep, in a den inside a big hollow tree, Yasha was born. There, he and his mother lived, warm and snug. But one day, hunters came and Yasha's mother was gone." So begins the true story of Yasha, an orphaned moon bear, and how he was adopted into a brand new family. Left without his mother in the Russian wilderness, Yasha was scared and alone. Would he be an orphan forever? Then, two young scientists named Liya and Sergey take him deep into the forest to teach him how to live in the wild. Yasha meets two more cubs, Shum and Shiksha, and soon the three bears are playing together like real brothers and sisters. The scientists protect their new family, but it is also their mission to raise the cubs to become wild bears with skills to survive on their own. Through heartwarming photographs of this unique rescue story, we watch Yasha learn and grow with his new family until he's finally ready to be on his own. Curious kids will also appreciate looking at the map of Yasha's homeland and places where other moon bears live, as well as learning interesting facts about them. Releases simultaneously in Reinforced Library Binding: 978-1-4263-1076-8 , \$25.90/\$29.00 Can National Geographic supports K-12 educators with ELA Common Core Resources. ### Emergency Response Guidebook United

States Department of Transportation The ERG is primarily applicable for hazardous materials transported by highway and railway, but also is applicable for materials transported by air or waterway, as well as by pipeline. It was first issued by the US Department of Transportation in 1973, but later became a joint publication of the Department of Transportation (US DOT), Transport

Canada (TC), and the Secretariat of Communications and Transportation (SCT) of Mexico, with collaboration with the Chemistry Information Center for Emergencies (CIQUIME) of Argentina. The ERG is issued every 4 years, with editions now being published in Spanish (Guía de Respuesta en Caso de Emergencia). In 1996 it was published as the North American Emergency Response Guidebook, but by the next publication in 2000 "North American" was removed due to its use by several South American countries). The ERG "is primarily a guide to aid first responders in quickly identifying the specific or generic hazards of the material(s) involved in the incident, and protecting themselves and the general public during the initial response phase of the incident" and should only be used for the "initial response phase" (about the first thirty minutes) of an incident . It is divided into six color-coded sections (white [uncolored], yellow, blue, orange, green, and a second white [uncolored]). The ERG includes over 170 "Guides" (found in the Orange Section) that identify the primary hazards associated with the applicable general category of hazardous material and general guidance on how to respond

to incidents involving that general category of hazardous material. The primary purpose of ERG is to direct the emergency responders to the most appropriate of these guides, based on the incident. The ERG also provides guidance regarding recommended evacuation distances, if applicable, in the Green Section.
