The first of its kind, this practicum-specific resource serves as an accompanying guidebook for fieldwork, placement, or classroom instruction in child and youth care practice. Child and Youth Care in the Field: A Practicum Guidebook uses critical reflection to facilitate student learning and growth throughout the practicum experience. Students can apply and build upon the theory and skills acquired during their fieldwork by utilizing the engaging workbook features and writing spaces included in the text. This resource helps prepare students for practicum and expand their self-awareness by discussing the challenges and difficulties they will encounter in the field, and by providing insight on how to navigate the decision-making process. With the increasing need for a hands-on resource in child and youth care studies, this book is well suited for first year, field placement, and professional skills courses in child and youth care programs at the

college and university level.

ARIST, published annually since 1966, is a landmark publication within the information science community. It surveys the landscape of information science and technology, providing an analytical, authoritative, and accessible overview of recent trends and significant developments. The range of topics varies considerably, reflecting the dynamism of the discipline and the diversity of theoretical and applied perspectives. While ARIST continues to cover key topics associated with classical information science (e.g., bibliometrics, information retrieval), editor Blaise Cronin is selectively expanding its footprint in an effort to connect information science more tightly with cognate academic and professional communities.

Rethink, Redesign, Reboot. Most people associate performance management with the annual review, which is universally dreaded by employees, management, and HR professionals alike. It's a cookie-cutter, fear-based, top-down approach that emphasizes negatives over positives and stifles healthy career conversations. It's never been shown to motivate anyone to do anything but try to avoid it, but nobody feels like they have any alternative. Tamra Chandler has one—and it works. Actually, Chandler doesn't offer a single alternative—she offers an infinite number of them. Each organization that uses her Performance Management Reboot is able to develop its own unique version since it doesn't make a lot of sense for organizations with different cultures, in different industries and sectors, to do things exactly the same way. Grounded in the latest scientific findings about motivation, it's a transparent, employee-driven process that values collaboration over competition and rewards people for acquiring new skills and increasing their contribution instead of hitting arbitrary benchmarks. Chandler lays out the general principles and then walks you through each step in creating a performance management process that employees will actually embrace rather than avoid and that will help you meet the three objectives of great performance management: developing your people, rewarding them equitably, and driving your organization's performance. It's the first comprehensive, step-by-step guide to creating a performance management solution that's tailored to your organization's needs and goals and that places the emphasis squarely on your greatest asset: your people.

Emerging Issues for Research and Practice Berrett-Koehler Publishers
The last century has seen enormous leaps in the development of digital technologies, and most aspects of modern life have changed significantly with their widespread availability and use. Technology at various scales - supercomputers, corporate networks, desktop and laptop computers, the internet, tablets, mobile phones, and processors that are hidden in everyday devices and are so small you can barely see them with the naked eye - all pervade our world in a major way. Computers and Society: Modern Perspectives is a wide-ranging and comprehensive textbook that critically assesses the global technical achievements in digital technologies and how are they are applied in media; education and learning; medicine and health; free speech, democracy, and government; and war and peace. Ronald M. Baecker reviews critical ethical issues raised by computers, such as digital inclusion, security, safety, privacy,automation, and work, and discusses social, political, and ethical controversies and choices now faced by society. Particular attention is paid to new and exciting developments in artificial intelligence and machine learning, and the issues that have arisen

from our complex relationship with AI.
MGMT Information Today, Inc.
This edited volume focuses on innovative solutions to the debate on human thriving in the fast emerging technology-driven cyber-physical work context, also called Industry 4.0. The volume asks the important question: How can people remain relevant and thrive in workplaces that are increasingly virtual, technology-driven, and imbued with artificial intelligence? This volume includes two major streams of discussion: it provides multidisciplinary perspectives on what thriving could mean for individuals, managers and organisations in current and future non-linear and Web-driven workspaces. In this context, it points to the need to rethink the curricula of the psychology of human thriving so that it is applicable to Industry 4.0. Second, it discusses the new platforms of learning opening up in organisations and the ways and means with which people's learning practices can be adapted to changing scenarios. Some of these scenarios are: changing job designs and talent requirements; the demand for creativity; the need for virtual teams and intercultural collaborations; and changing emotional competencies. This topical volume includes contributions by scholars from across the world, and is of interest to scholars, practitioners and postgraduate students of psychology, organizational behaviour and human resource management.

This book presents the generative rules for formal written communication, in an engineering context, through the lens of mathematics. Aimed at engineering students headed for careers in industry and professionals needing a “just in time” writing resource, this pragmatic text covers all that engineers need to become successful workplace writers, and leaves out all pedagogical piffle they do not. Organized into three levels of skill-specific instruction, A Math-Based Writing System for Engineers: Sentence Algebra & Document Algorithms guides readers through the process of building accurate, precise sentences to structuring efficient, effective reports. The book’s indexed design provides convenient access for both selective and comprehensive readers, and is ideal for university students; professionals seeking a thorough, “left -brained” treatment of English grammar and “go to” document structures; and ESL engineers at all levels.

Throw out gradebooks and meet the assessment system of the future! Mark Barnes’s formula for feedback, titled SE2R (Summarize, Explain, Redirect, Resubmit), has delivered stunning results to the forward-thinking schools that have tried it. The method in this book will loosen and then break your classroom’s dependence on the “A-through-F” grading system that does little more than silence student voices. Delving into what really motivates students, the book covers: How GPA is a classic example of “the tail wagging the dog” Utilizing mobile devices and social networks to maximize the benefits of SE2R Addressing and overcoming bureaucratic resistance to change
