Physicians, EMS Chiefs, Training Officers, and Field Paramedics throughout Florida developed the Florida Regional Common EMS Protocols. These protocols are based on National Standards and the most recent clinical studies regarding the delivery of prehospital care. Medical experts in the specialized areas of the protocols were an integral part of the protocol development process. In addition, an in-depth peer review was conducted to provide all participating agencies

the opportunity to give input into the design and content of the protocols.

Principles of EMS Systems, Third Edition provides EMS personnel with an overview of the organization and operation of an EMS system, both on a daily basis and in response to large-scale events, including terrorist and weapons of mass destruction incidents. This book explores the role the medical director plays in EMS and discusses the importance of medical oversight and accountability. By focusing on the collaborative interaction of EMS, police, and fire professionals, along with emergency physicians, emergency departments, and hospitals, this resource provides a framework for how these different groups must work together to ensure the emergency medicine/health care safety net does not fail when it is needed the most.

More than 250 people have been killed in the United States during what has been classified as active shooter and mass casualty incidents (AS/ MCIs) since the Columbine High School shootings in 1999. AS/ MCIs involve one or more suspects who participate in an ongoing, random or systematic shooting spree, demonstrating the intent to harm others with the objective of mass murder.

Emergency Medical Services (EMS) is a critical component of our nation's emergency and trauma care system, providing response and medical transport to millions of sick and injured Americans each year. At its best, EMS is a crucial link to survival in the chain of care, but within the last

several years, complex problems facing the emergency care system have emerged. Press coverage has highlighted instances of slow EMS response times, ambulance diversions, trauma center closures, and ground and air medical crashes. This heightened public awareness of problems that have been building over time has underscored the need for a review of the U.S. emergency care system. Emergency Medical Services provides the first comprehensive study on this topic. This new book examines the operational structure of EMS by presenting an in-depth analysis of the current organization, delivery, and financing of these types of services and systems. By addressing its strengths, limitations, and future challenges this book draws upon a range of concerns:

- The evolving role of EMS as an integral component of the overall health care system.
- EMS system planning, preparedness, and coordination at the federal, state, and local levels.
- EMS funding and infrastructure investments.
- EMS workforce trends and professional education.
- EMS research priorities and funding.

Emergency Medical Services is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency care providers, professional organizations, and policy makers looking to address the deficiencies in emergency care systems.

The Metropolitan Medical Response System's Field Operations Guide (FOG) for the Metropolitan Medical Strike Team (MMST). PMPH-USA Emergency Medical Services (EMS) agencies regardless of service delivery model have sought guidance on how to better integrate their emergency preparedness and response activities into similar processes occurring at the local, regional, State, tribal and Federal levels. The primary purpose of this project is to begin the process of providing that guidance as it relates to mass care incident deployment. The World Bank reported in 2005 that on aggregate, the reported number of natural disasters worldwide has been rapidly increasing, from fewer than 100 in 1975 to more than 400 in 2005. Terrorism, pandemic surge, and natural disasters have had a major impact on the science of planning for and responding to mass care incidents and remain a significant threat to the homeland. From the attacks of September 11th, 2001, the subsequent use of anthrax as a biological weapon, to the more recent surge concerns following the outbreak of H1N1 influenza, EMS have a real and immediate need for integration with the emergency management process, and to coordinate efforts with partners across the spectrum of the response community. The barriers identified from the literature review and interviews with national EMS leadership include: lack of access to emergency preparedness grant funding; underrepresentation on local, regional, and State level planning committees; and lack of systematic mandatory inclusion of all EMS provider types in State, regional, and local emergency plans. In December 2004, New York University's Center for Catastrophe Preparedness and Response held a national roundtable that included experts from major organizations representing the EMS system as a whole. The report from that meeting concluded that: " EMS providers, such as fire departments and hospital-based, commercial, and air ambulance

services, ensure that patients receive the medical care they need during a terrorist attack. While EMS personnel, including Emergency Medical Technicians and paramedics, represent roughly one-third of traditional first responders (which also include law enforcement and fire service personnel), the EMS system receives only four percent of first responder funding. If EMS personnel are not prepared for a terrorist attack, their ability to provide medical care and transport to victims of an attack will be compromised. There will be an inadequate medical first response. ” In 2007, the Institute of Medicine in its landmark report *Emergency Medical Services at the Crossroads* issued a recommendation that stated: “ The Department of Health and Human Services (DHHS), the Department of Homeland Security and the States should elevate emergency and trauma care to a position of parity with other public safety entities in disaster planning and operations. ” Since the time of these reports Federal progress to address these issues has included the creation of the Office of Health Affairs (OHA) within the Department of Homeland Security (DHS), the creation of the Emergency Care Coordination Center (ECCC) within HHS, and the creation of the Federal Interagency Committee on EMS (FICEMS) Preparedness Committee. In an effort to increase the level of preparedness among EMS agencies, the National Emergency Medical Services Management Association (NEMSMA) approached the DHS and OHA to engage them in a partnership that would provide a greater understanding of the shortfalls in EMS emergency preparedness and provide resources to fill those gaps. The primary objective of this project is to understand model policies and practices across a spectrum of disciplines and provider types that will lead to a better prepared EMS deployment to mass care incidents. This project should serve as a foundation for further development of EMS specific policies and templates that improve EMS readiness to manage the full spectrum of hazards that face their communities.

EMS providers learn the skills that allow them to give state-of-the-art care at the scene. Unfortunately, how to document that care so that it is not called into question two days or even two years down the road is often not taught in-depth. In order to help EMTs with this important subject, we assembled this water resistant, pocket-sized guide for providers at all levels, examining many of the common calls EMTs receive and following a standard protocol for the preparation of EMS run reports.

Problems contacting emergency services and delayed assistance are not unusual when incidents occur in rural areas, and the consequences can be devastating, particularly with mass casualty incidents. The IOM's Forum on Medical and Public Health Preparedness for Catastrophic Events held a workshop to examine the current capabilities of emergency response systems and the future opportunities to improve mass casualty response in rural communities.

This report discusses safety issues identified during the National Transportation Safety Board's special investigation of 55 emergency medical services (EMS) aircraft accidents that occurred in the United States between January 2002 and January 2005.

Safety issues discussed in this report focus on less stringent requirements for EMS operations conducted without patients on board, a lack of aviation flight risk evaluation programs for EMS operations, a lack of consistent, comprehensive flight dispatch procedures for EMS operations, and no requirements to use technologies such as terrain awareness and warning systems to enhance EMS flight safety.
