COVID-19 Considerations in the Deployed Setting (Presentation) - 27 May 2020, 35 pages INTRODUCTION The STANDARD MEDICAL OPERATING GUIDELINES (SMOG) continues to go through significant improvements with each release as a result of the collaboration of Emergency Medicine professionals, experienced Flight Medics, Aeromedical Physician Assistants, Critical Care Nurses, and Flight Surgeons. There has been close coordination in the development of these guidelines by the Joint Trauma System, and the Defense Committees on Trauma. Our shared goal is to ensure the highest quality en route care possible and to standardize care across all evacuation and emergency medical pre-hospital units. It is our vision that all of these enhancements and improvements will advance en route care across the services and the Department of Defense. Unit medical trainers and medical directors should evaluate Critical Care Flight Paramedics (CCFP) ability to follow and execute the medical instructions herein. These medical guidelines are intended to guide CCFPs and prehospital professionals in the response and management of

emergencies and the care and treatment of patients in both garrison and combat theater environments. Unit medical providers are not expected to employ these guidelines blindly. Unit medical providers are expected to manipulate and adjust these guidelines to their unit's mission and medical air crew training / experience. Medical directors or designated supervising physicians should endorse these guidelines as a baseline, appropriately adjust components as needed, and responsibly manage individual unit medical missions within the scope of practice of their Critical Care Flight Paramedics, Enroute Critical Care Nurses, and advanced practice aeromedical providers. The medication section of this manual is provided for information purposes only. CCFPs may administer medications only as listed in the guidelines unless their medical director (supervising physician) orders a deviation. Other medications may be added, so long as the unit supervising physician and/or medical director approves them. This manual also serves as a reference for physicians providing medical direction and clinical oversight to the CCFP. Treatment direction, which is more appropriate to the patient's condition than the guideline, should be provided by the physician as long as the CCFP scope of practice is not exceeded. Any medical guideline that is out of date or has been found to cause further harm will be updated or deleted immediately. The Medical Evacuation Concepts and Capabilities Division (MECCD) serves as the managing editor of the SMOG and are responsible for content updates, managing the formal review process, and identifying review committee members for the annual review. The Standard Medical Operating Guidelines are intended to provide medical procedural guidance and is in compliment to other Department of Defense and Department of the Army policies, regulatory and doctrinal guidance. Nothing herein overrides or supersedes laws, rules, regulation or policies of the United States, DoD or DA.

Progress in understanding the nature of the biological membrane has been very rapid over a broad front, but still pockets of ignorance remain. Application of the techniques of molecular biology has provided the sequences of a very large number of membrane proteins, and has led to the discovery of superfamilies of membrane proteins of related structure. In turn, the identification of these superfamilies has led to new ways of thinking about membrane processes. Many of these processes can now be discussed in molecular terms, and unexpected relationships between apparently unrelated phenomena are bringing a new unity to the study of biological membranes. The quantity of information available about membrane proteins is now too large for any one person to be familiar with anything but a very small part of the primary literature. A series of volumes concentrating on molecular aspects of biological membranes therefore seems timely. The hope is that, when complete, these volumes will provide a

convenient introduction to the study of a wide range of membrane functions. This first volume is devoted to general surveys of the structure and synthesis of membrane proteins and lipids, of the interactions between lipids and proteins, and of the functions of biological membranes.

**Emergency Medical Services Systems Amendments of 1979** Jeffrey Frank Jones  
Catastrophic disasters occurring in 2011 in the United States and worldwide—from the tornado in Joplin, Missouri, to the earthquake and tsunami in Japan, to the earthquake in New Zealand—have demonstrated that even prepared communities can be overwhelmed. In 2009, at the height of the influenza A (H1N1) pandemic, the Assistant Secretary for Preparedness and Response at the Department of Health and Human Services, along with the Department of Veterans Affairs and the National Highway Traffic Safety Administration, asked the Institute of Medicine (IOM) to convene a committee of experts to develop national guidance for use by state and local public health officials and health-sector agencies and institutions in establishing and implementing standards of care that should apply in disaster situations—both naturally occurring and man-made—under conditions of scarce resources. Building on the work of phase one (which is described in IOM's 2009 letter report, *Guidance for Establishing Crisis Standards of Care for Use in Disaster Situations*), the committee developed detailed templates enumerating the functions and tasks of the key stakeholder groups involved in crisis standards of care (CSC) planning, implementation, and public engagement—state and local governments, emergency medical services (EMS), hospitals and acute care facilities, and out-of-hospital and alternate care systems. *Crisis Standards of Care* provides a framework for a systems approach to the development and implementation of CSC plans, and addresses the legal issues and the ethical, palliative care, and mental health issues that agencies and organizations at each level of a disaster response should address. Please note: this report is not intended to be a detailed guide to emergency preparedness or disaster response. What is described in this report is an extrapolation of existing incident management practices and principles. *Crisis Standards of Care* is a seven-volume set: Volume 1 provides an overview; Volume 2 pertains to state and local governments; Volume 3 pertains to emergency medical services; Volume 4 pertains to hospitals and acute care facilities; Volume 5 pertains to out-of-hospital care and alternate care systems; Volume 6 contains a public engagement toolkit; and Volume 7 contains appendixes with additional resources.

Quality education starts and ends with competent and knowledgeable instruction. Today's students demand that educational programs be informative and challenging. With accreditation of EMS programs on the horizon—and the mandate that instructors develop their own teaching materials, not simply use "canned" materials off the shelf—EMS instructors need clear, detailed direction on course design and tools to enhance their courses. *Instructional Methods for Public Safety* offers a broad-spectrum view of the latest educational trends and cutting-edge information on emergency services instruction. Based on the current National Guidelines for Educating EMS Instructors by National Highway Traffic Safety Administration (NHTSA) and encompassing the recommendations of the EMS Education Standards, this resource offers new and experienced instructors concise guidance on the development of high-quality, interactive educational and assessment tools.

Written exclusively for EMS physicians with everything you need to know for certification A Doody's Core Title for 2021! In 2010 the American Board of Emergency Medicine (ABEM) began certifying emergency physicians in the subspecialty of Emergency Medical Services (EMS). Every EMS agency and system must have a physician available to provide medical direction of the service, in-the-moment consultation, and oversight of training and quality improvement. Whether they are working in the ambulance, on the streets, out in the wilderness, or in the skies, EMS physicians play a pivotal role as part of the EMS team. *EMS Medicine* is the most concise textbook written specifically for EMS physicians. While there are EMS books available for EMTs and EMS managers, only a fraction of their content covers what EMS physicians need to know. This well-written and

concise textbook details current EMS physician practice and provides precisely the information you need to successfully prepare for board certification. It covers operations and oversight, legal issues, business practices, disaster preparation and response, special operations, field procedures, transportation issues, and more.

Think back to a time when paramedics didn't exist. When "drivers" simply brought injured patients to the hospital. When the EMS industry was in its infancy. A time before Nancy Caroline. Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new

discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Pediatric Education for Prehospital Professionals Simon and Schuster Emergency Medical Services (EMS) is a critical component of our nation's emergency and trauma care system, providing response and medical transport to millions of sick and injured Americans each year. At its best, EMS is a crucial link to survival in the chain of care, but within the last several years, complex problems facing the emergency care system have emerged. Press coverage has highlighted instances of slow EMS response times, ambulance diversions, trauma center closures, and ground and air medical crashes. This heightened public awareness of problems that have been building over time has underscored the need for a review of the U.S. emergency care system. Emergency Medical Services provides the first comprehensive study on this topic. This new book examines the operational structure of EMS by presenting an in-depth analysis of the current organization, delivery,

and financing of these types of services and systems. By addressing its strengths, limitations, and future challenges this book draws upon a range of concerns: • The evolving role of EMS as an integral component of the overall health care system. • EMS system planning, preparedness, and coordination at the federal, state, and local levels. • EMS funding and infrastructure investments. • EMS workforce trends and professional education. • EMS research priorities and funding. Emergency Medical Services is one of three books in the Future of Emergency Care series. This book will be of particular interest to emergency care providers, professional organizations, and policy makers looking to address the deficiencies in emergency care systems.
