How Do The Endocrine And Reproductive System Work Together

The endocrine system controls the functioning of the reproductive system. The responsible endocrinal glands are known as the gonads. The gonads secrete sex hormones, which are responsible for sexual development, and the associated growth spurts in the body. They are also responsible for the development of secondary sexual characteristics.

1. What makes up the endocrine system? The endocrine system is made up of glands that release their products into the bloodstream. 2.

Chapter 39 Endocrine and Reproductive Systems, TE

In the body, the endocrine system is composed of a variety of different glands. The term ‘endocrine’ loosely means “secreting within”.

Endocrine glands send chemical signal molecules around the body to communicate information. Together with the nervous system, it is considered one the two ‘long distance control systems’ of the body.
