Vertebrate Endocrinology: Fundamentals and Biomedical

Implication, Volume 4, Part B: Reproduction provides information relevant to the structure and function of the vertebrate reproductive endocrinology. This book deals with a variety of subjects, including oocyte maturation, gestation, ovulation, vitellogenesis, spermatogenesis, as well as the maturation and aging of the reproductive system. Organized into nine chapters, this volume starts with an overview of the gonadotropin-releasing hormone (GnRH), which is the physiological regulator of luteinizing hormone (LH) and follicle-stimulating hormone (FSH) release from the pituitary gland. This book then explores the significance of gonadotropins in animal life, which act directly on the gonads of vertebrates and control the development, maturation, and release of gametes. Other chapters consider the interactions between the reproductive system and the pineal gland in photoperiodic mammals. The final chapter deals with the evolution of the endocrine systems, which is involved in the control of vertebrate reproduction. Reproductive endocrinologists

and developmental neuroendocrinologists will find this book extremely useful.

New techniques in cellular and molecular biology have increased our understanding of the mechanisms controlling reproductive function in the female. Emphasizing these new techniques, *Molecular Biology of the Female Reproductive System* provides a state-of-the-art review of local regulatory mechanisms that control reproductive processes. Stressing the interface of endocrinology, immunology, and cell biology, this book concentrates on the autocrine, paracrine, and endocrine systems that regulate both the functions of the ovary and uterus and the interaction between the early embryo and the mother. Key Features * Covers the mechanisms controlling reproductive function in the female * Offers a cellular and molecular approach to the control of reproductive function * Focuses on the ovary and uterus, and includes a discussion of the early embryo, including * Hormonal control of folliculogenesis and luteal function * Cell-cell interactions in the follicle * Role of cytokines in regulating steroid and protein hormone production * Endocrine receptors and mechanisms in ovulation * Cell biology of the oviduct and uterus * Migratory cells * Paracrine regulation * Hormones of the trophoblast and early placenta * Interaction between trophoblast and endometrium * Provides extensive references

Interactive Science Notebook: The Human Body Workbook Elsevier

This volume provides comprehensive coverage of the current knowledge of the physiology of the endocrine system and hormone synthesis and release, transport, and action at the molecular and cellular levels. It presents essential as well as in-depth information of value to both medical students and specialists in Endocrinology, Gynecology, Pediatrics, and Internal Medicine. Although it is well established that the endocrine system regulates essential functions involved in growth, reproduction, and homeostasis, it is increasingly being recognized that this complex regulatory system comprises not only hormones secreted by the classic endocrine glands but also hormones and regulatory factors produced by many organs, and involves extensive crosstalk with the neural and immune system. At the same time, our knowledge of the molecular basis of hormone action has greatly improved. Understanding this complexity of endocrine physiology is crucial to prevent endocrine disorders, to improve the sensitivity of our diagnostic tools, and to

provide the rationale for pharmacological, immunological, or genetic interventions. It is such understanding that this book is designed to foster.

This is an integrated textbook on the endocrine system, covering the anatomy, physiology and biochemistry of the system, all presented in a clinically relevant context appropriate for the first two years of the medical student course. One of the seven volumes in the Systems of the Body series. Concise text covers the core anatomy, physiology and biochemistry in an integrated manner as required by system- and problem-based medical courses. The basic science is presented in the clinical context in a way appropriate for the early part of the medical course. There is a linked website providing self-assessment material ideal for examination preparation.

Yen & Jaffe's *Reproductive Endocrinology* helps you successfully diagnose and manage the spectrum of female and male reproductive system diseases, from impaired fertility, infertility, and recurrent pregnancy loss through problems of sexual development, puberty, menstrual disturbances, fibroids, endometriosis, and reproductive aging. This trusted endocrinology reference book is ideal for studying or as a quick reference when making daily diagnostic and therapeutic decisions, ensuring it's just the resource you need to offer your patients the best possible care. Apply the latest reproductive endocrinology advances in basic and clinical science, including molecular, cellular, and genetic concepts, and grasp their relevance to pathophysiology, diagnosis, and therapy. Maximize fertility in women and men undergoing chemotherapy and other cancer treatments, and counsel patients on environmental factors affecting reproduction. Stay on top of recent developments including the impact of obesity on fertility; ovarian tissue banking; cryopreservation; pre-implantation genetic diagnosis; ovulation induction; and risks and treatments for steroid hormone-responsive cancers. View basic anatomic structures, endocrine processes, and cell function and dysfunction with absolute clarity through full-color illustrations and new images throughout. The Systems of the Body series has established itself as a highly valuable resource for medical and other health science students following today's systems-based courses. Now thoroughly revised and updated in this third edition, each volume presents the core knowledge of basic science and clinical conditions that medical students need, providing a concise, fully integrated view of each major body system that can be hard to find in more traditionally arranged textbooks or other resources. Multiple case studies help relate key principles to current practice, with links to clinical skills, clinical investigation and therapeutics made clear throughout. Each (print) volume also now comes with access to the complete, enhanced eBook version, offering easy anytime, anywhere access - as well as self-assessment material to check your understanding and aid exam preparation. The Endocrine System provides highly accessible

coverage of the core basic science principles in the context of clinical case histories, giving the reader a fully integrated understanding of the system and its major diseases. This book is dedicated to present different aspects of reproductive physiology and molecular endocrinology of commercially important as well as potential aquaculture fish species. The existing aquaculture generation is looking for species diversification for efficient utilization of available diverse water resources. The knowledge of reproductive physiology of fish will help in development of breeding strategy for use in commercial aquaculture. Reproductive system is highly coordinated and governed by means of complex network of nervous, endocrine system and environmental factor as well. This book emphasize on different key aspects of reproductive endocrine system such as basic gonadal biology in the events of climate vulnerability, sex determination, sex reversal, stimulatory hormones, inhibitory hormones and receptors, environmental and chemical factor guiding reproduction, puberty, neuroendocrine regulation of reproduction etc. This book further describes how reproduction is not just indispensable for the existence or survival of an individual, but it is important for the survival of species. Chapters also address the concerns of anthropogenic activities on fish and the aquatic environment lead main trouble on physiological and reproductive processes of aquatic animals. This book offers an attractive compilation of highly relevant aspects of current and future of aquaculture, especially in view of the growing awareness of aquaculture, to food scientists working on commercial fish, animal biologists, fish geneticists etc. This book is very timely, and relevant to the sustainable development goals. The contents would be relevant to policy makers, working towards blue revolution and blue economy.

The *Reproductive System at a Glance* is a comprehensive guide to normal reproductive biology and associated pathophysiology in both sexes. Concise, easy to read, and clearly structured, the double-page spreads progress from basic science to clinical abnormalities, and covers endocrine production and action, within one short volume. Chapters on disorders summarise epidemiology, pathophysiology, diagnosis and treatment. This new edition of *The Reproductive System at a Glance*: • Is fully revised and updated throughout to reflect recent developments in practice • Now features histological and pathological slides to complement the "at a glance" style explanatory illustrations • Now features radiologic studies to supplement the text in selected chapters • Contains more detailed coverage of maternal adaptations to pregnancy • Includes a companion website at www.ataglanceseries.com/reproduction featuring self-assessment multiple choice questions, bonus single answer questions and flashcards *The Reproductive System at a Glance* is an ideal guide for students studying both endocrine and reproductive subjects, and teaches the foundation concepts for the obstetrics and gynaecology

rotation, helping health professionals and students achieve a broad and practical understanding of the topic.

Mammalian Endocrinology and Male Reproductive Biology provides comprehensive and current coverage of the area of endocrinology and male reproductive biology, covering not just humans, but mammals in general. Written by international experts in their respective fields, this multi-author book also covers the latest developments in genomics of androgen action and male infertility. The book begins by covering sexual dimorphism in the central nervous system; structure, control of secretion and function of GnRH; and gonadotropins of pituitary origin and their role in gonadal functions. This is followed by an account of hormonal regulation of spermatogenesis, and the role of apoptosis in this process. Subsequent chapters center around epididymis, regulation of growth and function, and sperm motility regulation. The last chapters in the book discuss the structure and function of male accessory sex glands with associated pathologies as well as recent updates in male contraception, mechanism of androgen action, and genomics of male infertility. Wherever necessary, tables and figures have been added for a better understanding. Each chapter is appropriately referenced and contains current information on the latest developments in the field.

Human Biology is a textbook on human biology and presents facts and details about a number of diseases as well as organ transplants, antibiotics, and anesthetics. Other topics include world food, drug addiction, smoking, and lung cancer and the effects of radioactivity. The important subject of environmental pollution is also discussed. Some of the common disorders and diseases of the various systems are mentioned at the end of the chapters in addition to the characteristics of certain specified diseases. Comprised of 34 chapters, this book begins with an overview of man and his origins, as well as human biology and the human body. The discussion then turns to cell structure and tissues; the skin; the skeletal system; and joints. The biochemistry of foodstuffs is also examined, along with digestion and the alimentary system; the cardiovascular system; maintenance of body temperature; the genital system and reproduction; and hormones and the endocrine system. In addition, the book considers antibiotics, drugs, and anesthetics, as well as vectors and other parasites affecting humans. This monograph is intended for student nurses and potential medical students, as well as for non-science students and general readers who wish to learn something about the human body and its health.

The World Health Organization estimated that each year there are more than 13 million deaths caused by environmental causes. Exposure to endocrine disrupting chemicals (EDCs) during development may cause long-term health outcomes. This book, *Endocrine Disruptors*, includes eight chapters that illustrate potential endocrine-disrupting activities in water, sediments, crops, animals, and humans. This book assesses the relationship between the EDCs and development, reproduction, or obesity. Finally, detection of the levels of EDCs by autoluminescent cellular

bioreporters is discussed. Scientists, physicians, neuroendocrinologists, neurotoxicologists, and lay readers who have engaged in EDC studies or practice will discover that this book offers insight into all areas of EDC research.

Reproductive endocrinology Elsevier Health Sciences

This book provides a comprehensive overview of endocrinology of the male reproductive system, explaining how it works and how, sometimes, it fails to work. World-class specialists present state of the art knowledge on all aspects, including anatomy, physiology, molecular biology, genetics, pathophysiology, clinical manifestations of testicular diseases, endocrine aspects of andrological and sexual diseases, and therapy. Extensive consideration is given to sexual development, testicular function, the clinical approach to disorders of male reproduction, male hypogonadism, sexual dysfunction, and male infertility. In addition, sociodemographic, psychological, and ethical aspects of male reproductive disorders are discussed. The book is intended as a major reference for endocrinologists, andrologists, and sexologists, as well as basic and clinical scientists. It is published as part of the SpringerReference program, which delivers access to living editions constantly updated through a dynamic peer-review publishing process.
