 Giorgio Agamben is a philosopher well known for his brilliance and erudition, as well as for the difficulty and diversity of his seventeen books. The interest which his *Homo Sacer* sparked in America is likely to continue to grow for a great many years to come. Giorgio Agamben: A Critical Introduction presents the complexity and continuity of Agamben's philosophy—and does so

for two separate and distinct audiences. It attempts to provide readers possessing little or no familiarity with Agamben's writings with points of entry for exploring them. For those already well acquainted with Agamben's thought, it offers a critical analysis of the achievements that have marked it.

Lasers and electro-optics is a field of research leading to constant breakthroughs. Indeed, tremendous advances have occurred in optical

components and systems since the invention of laser in the late 50s, with applications in almost every imaginable field of science including control, astronomy, medicine, communications, measurements, etc. If we focus on lasers, for example, we find applications in quite different areas. We find lasers, for instance, in industry, emitting power level of several tens of kilowatts for welding and cutting; in medical applications, emitting power levels from few milliwatt to tens of Watt for various types of surgeries; and in optical fibre telecommunication systems, emitting power levels of the order of one milliwatt. This book is divided in four sections. The book presents several physical effects and properties of materials used in lasers and electro-optics in the first chapter and, in the three remaining chapters, applications of lasers and electro-optics in three different

areas are presented

This book explores the ways in which technology is being used by various open universities in developing countries to extend learner support services to distance learners. It shares the best practices being followed by different open universities so that these may be replicated by other universities. It provides an overview of the use of various digital

technologies, e-learning tools, eLearning platforms, virtual learning environments, and synchronous and asynchronous technologies in open and distance learning (ODL) systems. Moreover, it discusses the importance of ODL systems in providing inclusive education in developing countries through the use of ICT with a special focus on adult, rural and elderly learners, as well as the role of technology in science education through ODL system. A transformative model of sustainable collaborative learning is presented, integrating concepts based on theoretical frameworks to increase the flexibility and solve existing issues in developing countries, which may be used for policy changes in distance learning. It concludes by examining various challenges in successfully implementing technology for effective delivery of learner support services in distance education

systems in developing countries and exploring the strategies required to overcome these challenges.

The concept of the neoliberal city has become a key structuring analytical framework in the field of urban studies.

It explains both the ongoing transformation of urban policies and the socio-spatial effects of these policies within cities and highlights the prominent role of cities in the new geography of capitalism. Bringing together a team of leading scholars, this book challenges the neoliberal city thesis. It argues that the definition of neoliberalization may be more complex than it seems, resulting in oversimplified explanations of some processes, such as the rise of metropolitan governments or the importance given to urban economic development policies or gentrification. As a structuralist and macro-level theory, the "neoliberal city" does not shed light upon micro-level processes or identify and analyze actors' logics and

practices. Finally, the concept is profoundly influenced by the historical trajectories of the United Kingdom and the United States, and the generalization of this experience to other contexts often leads to a kind of academic ethnocentrism. This book argues that, on its own, the current conceptualizations of neoliberalization are insufficient. Instead, it should be analyzed alongside other transformative processes in order to provide an analytical framework to explain the variety of processes of change, motivations and justifications too easily labelled as urban neoliberalism. This unique and critical contribution will be essential reading for students and scholars alike working in Human Geography, Urban Studies, Economics, Sociology and Public Policy.
