For thousands of years,

human vision has been largely unchanged by evolution. We're about to get a software update. Today, Apple, Google, Microsoft, Facebook, Snap, Samsung, and a host of startups are racing to radically change the way we see. The building blocks are already falling into place:

cloud computing and 5G networks, AI computer vision algorithms, smart glasses and VR headsets, and mixed reality games like Pokémon GO. But what's coming next is a fundamental shift in how we experience the world and interact with each other. Over the next decade, what we see and how we see it will no longer be bound by biology. Instead, our everyday vision will be augmented with digital information to give us what spatial computing pioneer David Rose calls "SuperSight." And as our view of the world becomes blended layers of information delivered via glasses, contact lenses, or projected light, it will fundamentally change learning, shopping, work, play, and much, much more.

David provides an insider's guide to the way our lives are about to change, while also unpacking the downsides of this coming world—what he calls the hazards of SuperSight, from equity and access issues to bubble filter problems—and proposing rational, actionable ways around them. From AI mirrors that advise us on our outfits, to museums that let us talk with deceased explorers and artists, to the ways we envision sustainable cities, the scope of augmented vision is boundless. SuperSight offers a rich speculative preview of the future and its implications, both shocking and thrilling. [Visual QuickStart Guide](#)

The New York Times bestselling security droid with a heart (though it wouldn't

admit it!) is back in Fugitive Telemetry! Having captured the hearts of readers across the globe (Annalee Newitz says it's "one of the most humane portraits of a nonhuman I've ever read") Murderbot has also established Martha Wells as one of the great SF writers of today. No, I didn't kill the dead human. If I had, I wouldn't dump the body in the station mall. When Murderbot discovers a dead body on Preservation Station, it knows it is going to have to assist station security to determine who the body is (was), how they were killed (that should be relatively straightforward, at least), and why (because apparently that matters to a lot of people—who knew?) Yes, the unthinkable is about to happen: Murderbot must voluntarily speak to humans! Again! A new standalone adventure in the New York Times–bestselling, Hugo and Nebula Award winning series!

Carbon Queen MIT Press Living The Remote Dream details my journey to make an impact in the world without being constrained by the concept of a conventional workplace. I hope this guide will enable more of us to travel the world, spend more time with our families, and be even more productive. The daily commute has become an ingrained part of modern society, largely defined by what was necessary to communicate and share ideas decades ago. In the Internet age, the globe is far smaller. Connectivity is abundant, and collaborating with colleagues sitting in

different continents is no longer the challenge it once was. As the walls of communication have been shattered by e-mail, video chats and telepresence solutions, it's time that we redirect the resources we're spending on our 9 to 5 treks. This book provides step-by-step guidance in planning for a remote transition, tackling the topic with your boss, and working to ensure that you're even more productive when left to define your own office. You'll learn what's in my arsenal of gadgetry, and which tools I lean on most to hone my focus and productivity. You'll understand that getting away from the grind is oftentimes what is needed to find the clarity you've been seeking. You'll also learn a little

about me, my journey through the halcyon years of tech blogging, and what careers are best suited for remote working arrangements. *Living The Remote Dream* delivers practical, actionable advice on how to pivot your career into a remote one. For those who long for more freedom and flexibility - and are willing to work for it - this guide is for you.

Can we change the minds of science deniers? Encounters with flat earthers, anti-vaxxers, coronavirus truthers, and others. "Climate change is a hoax--and so is coronavirus." "Vaccines are bad for you." These days, many of our fellow citizens reject scientific

expertise and prefer ideology to facts. They are not merely uninformed--they are misinformed. They cite cherry-picked evidence, rely on fake experts, and believe conspiracy theories. How can we convince such people otherwise? How can we get them to change their minds and accept the facts when they don't believe in facts? In this book, Lee McIntyre shows that anyone can fight back against science deniers, and argues that it's important to do so. Science denial can kill. Drawing on his own experience--including a visit to a Flat Earth convention--as well as academic research, McIntyre outlines the common themes of

science denialism, present in misinformation campaigns ranging from tobacco companies' denial in the 1950s that smoking causes lung cancer to today's anti-vaxxers. He describes attempts to use his persuasive powers as a philosopher to convert Flat Earthers; surprising discussions with coal miners; and conversations with a scientist friend about genetically modified organisms in food. McIntyre offers tools and techniques for communicating the truth and values of science, emphasizing that the most important way to reach science deniers is to talk to them calmly and respectfully--to put ourselves out there, and meet them face to face.

From the New York Times bestselling author of Star Wars: Resistance Reborn comes the first book in the Between Earth and Sky trilogy, inspired by the civilizations of the Pre-Columbian Americas and woven into a tale of celestial prophecies, political intrigue, and forbidden magic. A god will return

When the earth and sky converge Under the black sun In the holy city of Tova, the winter solstice is usually a time for celebration and renewal, but this year it coincides with a solar eclipse, a rare celestial event proscribed by the Sun Priest as an unbalancing of the world.

Meanwhile, a ship launches from a distant city bound for Tova and set to arrive on the solstice. The captain of the ship, Xiala, is a disgraced Teek whose song can calm the waters around her as easily as it can warp a man's mind. Her ship carries one passenger. Described as harmless, the passenger, Serapio, is a young

man, blind, scarred, and cloaked in destiny. As Xiala well knows, when a man is described as harmless, he usually ends up being a villain. Crafted with unforgettable characters, Rebecca Roanhorse has created an epic adventure exploring the decadence of power amidst the weight of history and the struggle of individuals swimming against the confines of society and their broken pasts in the most original series debut of the decade.

Want to Marie Kondo your digital life and develop a more tactful approach to technology? By a leading tech and digital culture journalist, Kill Reply All is a guide to tidying it all up. How do you reply to your colleague's weird email? What would Emily Post say about your Tinder profile? And just how do you know if you're mansplaining? In this irreverent journey through the murky world of digital etiquette, Wired's Victoria Turk provides an indispensable guide to minding our manners in a brave new online world, and making peace with the

platforms, apps, and devices we love to hate. The digital revolution has put us all within a few clicks, taps, and swipes of one another. But familiarity can breed contempt, and while we 're more likely than ever to fall in love online, we 're also more likely to fall headfirst into a raging fight with a stranger or into an unhealthy obsession with the phones in our pockets. If you 've ever encountered the surreal, aggravating battlefields of digital life and wondered why we all don 't go analog, this is the book for you.

A Step-by-Step Guide to Computer Security for Non-Techies Simon and Schuster For readers of *Bad Blood* and *Empire of Pain*, an authoritative look at monopoly medicine from the dawn of patents through the race for COVID-19 vaccines and how the privatization of public science has prioritized profits over people. *Owning the Sun*

tells the story of one of the most contentious fights in human history: the legal right to control the production of lifesaving medicines. Medical science began as a discipline geared toward the betterment of all human life, but the merging of research with intellectual property and the rise of the pharmaceutical industry warped and eventually undermined its ethical foundations. Since the Second World War, federally funded research has facilitated most major medical breakthroughs, yet these drugs are often wholly controlled by price-gouging corporations with growing international ambitions. Why does the U.S. government fund the development of medical science in the name of the public, only to relinquish exclusive rights to drug companies, and how does such a system impoverish us, weaken our responses to global crises, and, as in the case of AIDS and COVID-19, put the world at

risk? Outlining how generations of public health and science advocates have attempted to hold the line against Big Pharma and their allies in government, Alexander Zaitchik 's first-in-kind history documents the rise of medical monopoly in the United States and its subsequent globalization. From the controversial arrival of patent-wielding German drug firms in the late nineteenth century, to present-day coordination between industry and philanthropic organizations—including the influential Gates Foundation—that stymie international efforts to vaccinate the world against COVID-19, *Owning the Sun* tells one of the most important and least understood histories of our time.

How to Talk to a Science Denier Penguin

In this “ bold and dramatic portrayal of characters on the cusp of an impossible choice ” (Publishers Weekly), two sisters from a wealthy Chinese-Indonesian family grapple with secrets and betrayal after one of them poisons their entire family. Gwendolyn and Estella have always been as close as sisters can be. Growing up in a wealthy, eminent, and sometimes deceitful family, they ’ ve relied on each other for support and confidence. But now Gwendolyn is lying in a coma, the sole survivor of Estella ’ s poisoning of their whole clan. As Gwendolyn

struggles to regain consciousness, she desperately retraces her memories, trying to uncover the moment that led to this shocking act. Was it their aunt ’ s mysterious death at sea? Estella ’ s unhappy marriage to a dangerously brutish man? Or were the shifting loyalties and unspoken resentments at the heart of their opulent world too much to bear? Can Gwendolyn, at last, confront the carefully buried mysteries in their family ’ s past and the truth about who she and her sister really are? Traveling from the luxurious world of the rich and powerful in Indonesia to the most spectacular shows at Paris Fashion Week, from the sunny coasts of California to the melting pot of Melbourne ’ s university scene, *The Majesties* “ is a thrilling, tender page-turner ” (Krys Lee, author of *Drifting House*) as well as “ a sobering look at the dark side of extreme wealth ” (Kirkus Reviews).

From the first dog to the first beefalo, from farming to CRISPR, the human history of remaking nature When the 2020 Nobel Prize was awarded to the inventors of CRISPR, the revolutionary gene-editing tool, it underlined our amazing and apparently novel powers to alter nature. But as biologist Beth Shapiro argues in *Life as We Made It*, this phenomenon isn't new. Humans have been reshaping the world around us for ages, from early dogs to modern bacteria modified to pump out insulin. Indeed, she claims, reshaping nature—resetting the course of evolution, ours and others'—is the essence of what our species does. In exploring our evolutionary and cultural history, Shapiro finds a course for the future. If we have always been changing nature to help us survive and thrive, then we need to avoid naive

arguments about how we might destroy it with our meddling, and instead ask how we can meddle better. Brilliant and insightful, *Life as We Made It* is an essential book for the decades to come.

This engaging study traces the development of closed captioning—a field that emerged in the 1970s and 1980s from decades-long developments in cinematic subtitling, courtroom stenography, and education for the deaf. Gregory J. Downey discusses how digital computers, coupled with human mental and physical skills, made live television captioning possible.

Downey's survey includes the hidden information workers who mediate between live audiovisual action and the production of

visual track and written records. His work examines communication technology, human geography, and the place of labor in a technologically complex and spatially fragmented world. Illustrating the ways in which technological development grows out of government regulation, education innovation, professional profit-seeking, and social activism, this interdisciplinary study combines insights from several fields, among them the history of technology, human geography, mass communication, and information studies.

Return to The Meridian with New York Times bestselling author Rebecca Roanhorse's sequel to the most critically hailed epic fantasy of 2020 *Black Sun*—finalist for the Hugo, Nebula, Lambda, and Locus awards. There are no tides more treacherous than those of the heart. —Teek saying

The great city of Tova is shattered. The sun is held within the smothering grip of the Crow God's eclipse, but a comet that marks the death of a ruler and heralds the rise of a new order is imminent.

The Meridian: a land where magic has been codified and the worship of gods suppressed. How do you live

when legends come to life, and the faith you had is rewarded? As sea captain Xiala is swept up in the chaos and currents of change, she finds an unexpected ally in the former Priest of Knives. For the Clan Matriarchs of Tova, tense alliances form as far-flung enemies gather and the war in the heavens is reflected upon the earth. And for Serapio and Naranpa, both now living avatars, the struggle for free will and personhood in the face of destiny rages. How will Serapio stay human when he is steeped in prophecy and surrounded by those who desire only his power? Is there a future for Naranpa in a transformed Tova without her total destruction? Welcome back to the fantasy series of the decade in *Fevered Star*—book two of *Between Earth and Sky*.
