Ethics for Robots describes and defends a method for designing and evaluating ethics algorithms for autonomous machines, such as self-driving cars and search and rescue drones. Derek Leben argues that such algorithms should be evaluated by how effectively they accomplish the problem of cooperation among self-interested organisms, and therefore, rather than simulating the psychological systems that have evolved to solve this problem, engineers should be tackling the problem itself, taking relevant lessons from our moral psychology. Leben draws on the moral theory of John Rawls, arguing that normative moral theories are attempts to develop optimal solutions to the problem of cooperation. He claims that Rawlsian Contractarianism leads to the ' Maximin ' principle -- the action that maximizes the minimum value -- and that the Maximin principle is the most effective solution to the problem of cooperation. He contrasts the Maximin principle with other principles and shows how they can often produce non-cooperative results. Using real-world examples -- such as an autonomous vehicle facing a situation where every action results in harm, home care machines, and autonomous weapons systems -- Leben contrasts Rawlsian algorithms with alternatives derived from utilitarianism and natural rights libertarianism. Including chapter summaries and a glossary of technical terms, Ethics for Robots is essential reading for philosophers, engineers, computer scientists, and cognitive scientists working on the problem of ethics for autonomous systems.

This book is a compilation of peer-reviewed papers from the 2018 Asia-Pacific International Symposium on Aerospace Technology (APISAT 2018). The symposium is a common endeavour between the four national aerospace societies in China, Australia, Korea and Japan, namely, the Chinese Society of Aeronautics and Astronautics (CSAA), Royal Aeronautical Society Australian Division (RAeS Australian Division), the Korean Society for Aeronautical and Space Sciences (KSAS) and the Japan Society for Aeronautical and Space Sciences (JSASS). APISAT is an annual event initiated in 2009 to provide an opportunity for researchers and engineers from Asia-Pacific countries to discuss current and future advanced topics in aeronautical and space engineering.

This new edition introduces and examines the space technologies that benefit our everyday lives. Each chapter now includes exercises and problems, and the content covers new satellites and emerging technologies. It explores the ever-improving quality of satellite systems and services, and also investigates ways to bring about higher resolution satellite imagery and lower satellite costs. The focus is on man-made satellites, which are becoming smaller, smarter, cheaper, and easier to launch, having a longer life span,

and are less susceptible to interference. Furthermore, the book considers advances in several key technologies that affect the satellite industry. Includes extensive study questions and exercises after each chapter. Explains present commercial space technology and its future outlook. Explores the many applications of space technologies and their impact on our lives, including real world examples. Presents a future outlook on robotics, communications and navigation, and human health and nanotechnology. Provides a clear understanding of space, space technologies, space applications, space security, space regulations, a space roadmap, and their impact on the lives of humans now and for generations to come.

A Treatise on the Steam Engine ... By the Artizan Club. Edited by John Bourne ... New edition

We Were Brothers in Arms is an attempt to understand the experience of battle during WW2 through the personal experiences of the ordinary soldier. Frank Clark has gathered together the amazing stories of British soldiers during the eleven months of frenzied warfare that followed D-Day, and combined them into this fascinating volume. As a veteran himself (serving in WW2, Korea, Malaya, Cyprus, Northern Ireland and during the Cold War), Frank is well versed in the adrenalin of battle, and here he brings together the tales of a wide cross section of fighting men on the front line. There are stories from the infantry, the assault troops who stormed the Normandy beaches and forced bridgeheads. The dashing reconnaissance men in their thin-skinned, tanks sending back vital radio reports; the parachutists, dropping behind enemy lines to fight, the sappers building bridges and clearing minefields under fire; the gunners, bringing down fast, furious and accurate barrages; the signallers, patching up communication links; the non-combatant stretcher-bearers, the doctors tending the wounded, the support services bringing up food and ammunition. This book tells their story of war, and reminds us why their sacrifice should never be forgotten. We Were Brothers in Arms is a compelling account of the last months of war told through eye witness accounts, some never before published.
