Studies in diachronic linguistics increasingly
acknowledge that linguistic change is highly
context-dependent and somehow tied to
constructions as linguistic units. This is the
first volume to investigate the role of
constructions and the potential of
constructional approaches in linguistic
change. The contributions in this volume
comprise both theoretical and empirical
studies, all of which are accessible for a
general audience. While some contributions
explicitly aim at comparing and unifying
concepts from both traditional grammatical
theories and recent construction grammar
approaches, others offer detailed case studies
of exemplary problems from a constructional
point of view. The papers offer a cross-
linguistic perspective and deal with a number
of different language families, ranging from
Germanic to Austronesian.

The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

Reflecting on two decades of 'competitiveness-oriented' urban policies in Europe, this book investigates the current challenges cities face to sustain their economic position and how this can be balanced with social progress and environmental improvements. Complementing previous surveys on local and urban development and competitiveness-based strategies, this volume provides longer term views on the evolution of such policies at the city level, from the personal perspective of city officials in eight European cities. More concretely, it looks at how the urban dimension in EU policies have evolved over time, the kinds of urban policy supported by the EU over the last two decades and how cities have been involved with this process. The book investigates the portfolios of competitiveness-oriented policies which have been developed by European cities and how they see the link between urban/spatial development policies and sustainable competitiveness. Finally the book fleshes out a number of challenges and initiatives taken by the eight European cities and their governments in the face of current challenges in order to pave the way towards more competitive and sustainable urban economies.

This study assesses the potential of new technology to reduce logistics support requirements for future Army combat systems. It describes and recommends areas of research and technology development in which the Army should invest now to field systems that will reduce logistics burdens and provide desired capabilities for an "Army After Next (AAN) battle force" in 2025.
