Use the calculator below, or you can calculate your engine size by taking the square of the bore divided by 4 , multiplied by pi, multiplied by the stroke, multiplied bye the calculator below, or you can calculate your engine size by taking the square of the bore dinders: ( (Bore X Bore) / 4) X pi X Stroke X Cylinders. For example, a Chysler 426 (Hemi or Wedge) has a standard bore of 4.25" and a standard stoke of 3.75".

The RB engines, produced from 1959 to 1979 , are Raised-Block (taller) versions of the $B$ engines. All RB engines have a 33 ? 4 in $(95.3 \mathrm{~mm}$ ) stroke, with the bore being the defining factor in engine size. All RB wedge engines share a deck height of 10.725 in ( 272.4 mm ) and were fitted with 6.768 in ( 171.9 mm ) long connecting rods, resulting ...

How to Measure Cylinder Bore: 12 Steps (with Pictures ..
To do that there are two dimensions in an engine's configuration which determine displacement: the engine's bore and stroke. At the risk of stating the obvious, the bore of the engine is the diameter of the cylinder (and the piston inside of it), while the stroke is the vertical distance the piston travels within the cylinder. There are lots of debates, both in real life and on the internet, about which dimension is worth more power.

Bore was increased to $3.875 \mathrm{in}(98.4 \mathrm{~mm})$ (same as the later 283 Chevy) he same at 3.4375 in $(87.31 \mathrm{~mm})$. Two-barrel carburetion was standard; all high performance 324 s came with four-barrel carburetors.

The $5.2 \mathrm{~L} ; 315.1 \mathrm{cu}$ in $(5,163 \mathrm{cc})$ "Voodoo" is a development of the Coyote engine. The engine was developed specifically for the Shelby GT350 version of the sixth generation Mustang. Bore and stroke are both up from the 5.0 L Coyote at $94 \mathrm{~mm} \times 93 \mathrm{~mm}$ ( $3.70 \mathrm{in} \times 3.66$ in), as is the compression ratio at 12.0:1.
In a piston engine, the bore (or cylinder bore) is the diameter of each cylinder. Engine displacement is calculated based on bore, stroke length and the number of cylinders: displacement $=?(1 . / .2 \times$ bore $) 2 \times$ stroke $\times$ ncylinders.
