Mechanical Engineers'
Handbook Bentley
Pub
Since its first
appearance in 1950,

Pounder's Marine Diesel Engines has served seagoing engineers, students of the Certificates of Competency examinations and the marine engineering industry throughout the world. Each new edition has noted the changes in engine design and the

influence of new technology and economic needs on the marine diesel engine. This eighth edition retains the directness of approach and attention to essential detail that characterized its predecessors. There are new chapters on monitoring control

systems and governor systems, gas turbines and safety aspects of engine operation. Important developments such as the latest diesel-electric LNG carriers that will soon be in operation. After experience as a seagoing engineer with the British India Steam Navigation Company, Doug Woodyard held editorial positions with the Institution of Mechanical Engineers and the Institute of Marine Engineers. He subsequently edited The Motor Ship journal for eight years before becoming a freelance editor specializing in shipping, shipbuilding and marine engineering. He is currently technical editor of Seatrade, a contributing editor to Speed at Sea, Shipping World and Shipbuilder

and a technical press consultant to Rolls-Royce Commercial Marine. * Designed to reflect the recent changes to SQA/Marine and Coastguard Agency Certificate of Competency exams. Careful organisation of the new edition enables readers to access the information they require * Brand new chapters focus on monitoring control systems and governor systems, gas turbines and safety aspects of engine operation * High quality, clearly labelled illustrations and figures

The main theme of the

publication is the promotion of efficient production and use of energy through wider application of cogeneration technology. Cogeneration is the combined generation of heat and power, and is widely recognised as an attractive alternative to the conventional power and heat

generating options due to its low capital investment, shorter gestation period, reduced fuel consumption and associated environmental pollution, and increased fuel diversity. Although technical advantages of cogeneration have been known for a long time, this technology

is still not very widely applied, particularly in the developing countries of the region. The publication presents results of detailed country studies on cogeneration potential as well as pre-feasibility studies in selected industries. This publication is aimed at those who wish to share, learn

about or possibly adopt cogeneration technology.

Haynes Publishing TW Index is a complete and detailed index of everything that has appeared in the SDC Turning Wheels magazine since its inception in 1972. Of greatest importance are the

advice items that are indexed by subject (engines, brakes, steering, etc.), model AND year including all individual letters that appear in the Co-Operator column. Historical items are also indexed by subject as well as by the vehicle (model and year) they relate to. If you own, for instance, a 1959 Hawk, TW Index will give you instant access to everything that has been published about your car and much more. Each listing, of course, refers you to the specific issue of "Turning Wheels" and cites the page on which the item begins. Rated "excellent" by Fred Fox and Bob

Palma. Volume 1 of Turning Wheels Index includes issues of Turning Wheels from 1972 through 1992 with 10,711 references on 159 pages. Volume 2 includes 1993 through 2009 with 9,995 references on 158 pages.
