The discovery of the Higgs boson made headlines around the world. Two scientists, Peter Higgs and François Englert, whose theories predicted its existence, shared a Nobel Prize. The discovery was the culmination of the largest experiment ever run, the ATLAS and CMS experiments at CERN's Large Hadron Collider. But what really is a Higgs boson and what does it do? How was it found? And how has its discovery changed our understanding of the fundamental laws of nature? And what did it feel like to be part of it? Jon Butterworth is one of the leading physicists at CERN and this book is the first popular inside account of the hunt for the Higgs. It is a story of incredible scientific collaboration, inspiring technological innovation and ground-breaking science. It is also the story of what happens when the world's most expensive experiment blows up, of neutrinos that may or may not travel faster than light, and the reality of life in an underground bunker in Switzerland. This book will also leave you with a working knowledge of the new physics and what the discovery of the Higgs particle means for how we define the laws of nature. It will take you to the cutting edge of modern scientific thinking.

No stone was left unturned in researching this book. This incredibly comprehensive work includes many items from John Cooper's personal records and photo albums, the company's chassis books, as well as 300-plus black-and-white photos and 16 color images. Further unique archival material comes from many of those involved in building the cars and the cars' subsequent owners. Unquestionably regarded as the benchmark work on Cooper, the cars so significant in the development of postwar racing car design. Registration Methods for the Small Museum Springer Science & Business Media

Martin Gardner has entertained the world with his puzzles for decades and inspired countless mathematicians and scientists. As he rounds out another decade, his colleagues are paying him tribute with this special collection that contains contributions from some of the most respected puzzlemasters, magicians and mathematicians, including: - John H. Conway - William R. Gosper - Ed Pegg, Jr. - Roger Penrose - Raymond

Smullyan - Peter Winkler. And of course there is something from the original puzzlemaster himself, Martin Gardner.

An accessible account of the work leading up to the monumental discovery of the Higgs boson, from one of the physicists who was there. Particle physics as we know it depends on the Higgs boson: It ' s the missing link between the birth of our universe—as a sea of tiny, massless particles—and the tangible world we live in today. But for more than 50 years, scientists wondered: Does it exist? Physicist Jon Butterworth was at the frontlines of the hunt for the Higgs at CERN ' s Large Hadron Collider—perhaps the most ambitious experiment in history. In *Most Wanted Particle*, he gives us the first inside account of that uncertain time, when an entire field hinged on a single particle, and life at the cutting edge of science meant media scrutiny, late-night pub debates, dispiriting false starts in the face of intense pressure, and countless hours at the collider itself. As Butterworth explains, our first glimpse of the elusive Higgs brings us a giant step closer to understanding the universe—and points the way to an entirely new kind of physics. Praise for *Most Wanted Particle*

“ Butterworth is an insider ' s insider. His narrative seethes with insights on the project ' s science, technology and “ tribes, ” as well as his personal (and often amusing) journey as a frontier physicist. ”

—Nature “ A vivid account of what the process of discovery was really like for an insider. ” —Peter Higgs, winner of the Nobel Prize in Physics “ If you want to know why the discovery of the Higgs boson matters, read this book! ” —Brian Cox, author of *Why Does E = mc²?*

Additive Manufacturing for the Aerospace Industry explores the design, processing, metallurgy and applications of additive manufacturing (AM) within the aerospace industry. The book's editors have assembled an international team of experts who discuss recent developments and the future prospects of additive manufacturing. The work includes a review of the advantages of AM over conventionally subtractive fabrication, including cost considerations. Microstructures and mechanical properties are also presented, along with examples of components fabricated by AM. Readers will find information on a broad range of materials and processes used in additive manufacturing. It is ideal reading for those in academia, government labs, component fabricators, and research institutes, but will also appeal to all sectors of the aerospace industry. Provides information on a broad range of materials and processes used in additive manufacturing Presents recent developments in the design and applications of additive manufacturing specific to the aerospace industry Covers a wide array of materials for use in the additive manufacturing of aerospace parts Discusses current standards in the area of aerospace AM parts

Breaking new ground as the first ever extensive survey of one of the most important and intriguing themes in art today, this book examines the phenomenon of the ideological exchange and often obsessive relationship between artist and museum." "The works chosen for inclusion here, as well as direct quotations from the writings of individual artists, offer a wide-ranging coverage of projects by established and emerging figures alike. The artists featured include such names as Tracey Emin, Hans Haacke, Christian Boltanski, Fred Wilson and Ilya Kabakov. Art and Artifact will serve as an indispensable guide to the position and likely future role of the museum at the beginning of the 21st century,

whether within the walls of an institutional building or in the broader context of the urban environment."--BOOK JACKET.

"The Delirious Museum" is a remarkable, illuminating work, which presents an original view of the idea of the museum in the twenty-first century, re-imagining the possibilities for museums and their displays and re-examining the blurred boundaries between museums and the cities around them. On his quest for the Delirious Museum, Storrie takes a journey that begins in the Louvre and continues through Paris, London, Los Angeles and Las Vegas. He encounters on his way the museum architecture of John Soane, Carlo Scarpa and Daniel Libeskind, the exhibitions of El Lissitzky and of Frederick Kiesler, and the work of artists as varied as Marcel Duchamp, Andy Warhol, Marcel Broodthaers, Sophie Calle and Mark Dion.

This report presents the results of the project Safe Future Inland Transport Systems (SafeFITS), which aims to develop a robust road safety decision-making tool to support the most appropriate road safety policies and measures to achieve tangible results. Road accidents constitute a major social problem in modern societies, accounting for more than 1 million accidents per year in EU-28 (2,900 per day), resulting in 1.4 million injuries and 26,000 fatalities. Current trends suggest that, unless action is taken, traffic injuries will become the fifth leading cause of death by 2030, with the disparity between high-income and low-income countries further increased.
