Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands

the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of

the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

"The Delirious Museum" is a remarkable, illuminating work, which presents an original view of the idea of the museum in the twenty-first century, re-imagining the possibilities for museums and their displays and re-

examining the blurred boundaries between museums and the cities around them. On his quest for the Delirious Museum, Storrie takes a journey that begins in the Louvre and continues through Paris, London, Los Angeles and Las Vegas. He encounters on his way the museum architecture of John Soane, Carlo Scarpa and Daniel Libeskind, the exhibitions of El Lissitzky and of Frederick Kiesler, and the work of artists as varied as Marcel Duchamp, Andy Warhol, Marcel Broodthaers, Sophie Calle and Mark Dion.

SAE International Senegal, like all African countries, needs better and more jobs for its growing population. The main message of Digital Senegal for Inclusive Growth is that broader use of productivity-enhancing technologies by households and enterprises can generate such jobs, including for lower-skilled people. Adoption of better technologies can support both Senegal ' s short-term objective of economic recovery and its vision of economic transformation with more inclusive growth. But this is not automatic. This book leverages a novel survey instrument that measures adoption of technologies at the firm level. Results from this survey show that there is a large average technological gap in Senegal relative to firms in Brazil, in the range of 36 and 30 percent for extensive (whether firms use it at all) and intensive (the most frequently applied) uses of better technologies such as for business administration. Except for a small number of firms, enterprises still mostly use manual,

analog technologies to perform general and sector specific business functions. Micro-size informal enterprises lag even further. The benefits from technology adoption are significant. Digital technologies are an enabler of economy-wide productivity and jobs growth by catalyzing adoption of complementary technologies, including many not accessible without digital infrastructure. For households, mobile internet coverage is associated with 14 percent higher total consumption, as well as a 10 percent lower extreme poverty rate—and jobs with higher earnings. Firms with better technologies have higher levels of productivity, generate more jobs, and increase the share of lower-skilled workers on their payroll, on average: an increase in technological sophistication across general business functions that the firm uses most intensively, such as using standard software rather than writing by hand for business administration, is associated with a 14 percent higher jobs growth rate. For these and other inclusive growth benefits to be realized, Senegal should focus on ensuring availability of affordable digital infrastructure and implementing targeted incentives to promote use by firms of better technologies as well as policies to narrow deepening digital divides across enterprises and households.

How difficult it can be to forgive others or to accept forgiveness or to accept that someone who had offended the community has been reconciled and accepted back into it. For two millennia Christians have pondered the scope of the forgiveness Jesus taught and lived. They have celebrated practices and rites that have enabled the faithful to forgive, to be forgiven, and to accept that God brings reconciliation even when we find it almost impossible to forgive. This book traces that history to the present, offering a sense not only of how the rites of reconciliation matter to Catholics but how our struggles with forgiveness are a real contribution to reconciliation in our world.

Vidarbha—the parched heartland of central India—has become the foremost site of farmer suicides in the country. These suicides are the most striking indictment of the neglect of agriculture by the state. But the story of the farmers' distress does not end with their death—it lives on in the experience of their widows who struggle to survive in the shadows. *Widows of Vidarbha* tells the story of 16 such widows who have been invisible to the state, the community, and even their families, and talks of their lost dreams, their diminished worldviews, and their helpless surrender to the conveniences of patriarchy. These narratives throw light on the dark and desperate corners of their invisible world, one that reflects the state of farm widows across the country.

While economic and social indicators in many Middle

East and North Africa (MENA) countries have improved over the past three decades, the region's blue natural assets—clean air, healthy seas, and coastlines—have degraded virtually everywhere. Air pollution levels in the region's cities are among the highest in the world. Per capita marine plastic pollution is among the highest in the world; coastal erosion rates are the second fastest in the world. These combined challenges threaten local communities, livelihoods, and economies. In fact, the economic cost of MENA's deteriorating skies and seas is estimated at more than 3 percent of GDP per year. *Blue Skies, Blue Seas: Air Pollution, Marine Plastics, and Coastal Erosion in the Middle East and North Africa* reviews integrated solutions that the authors identify as the “four I's”:

- Inform stakeholders about the sources of these challenges.
- Provide incentives that improve environmental outcomes for the public and the private sector.
- Strengthen institutions to lower air and plastic pollution and to mitigate uncontrolled development and erosion of coastlines.
- Invest in abatement options and promote sustainable solutions.

Restoring MENA's blue skies and seas will benefit the health, livelihoods, and incomes of residents. There will inevitably be trade-offs, but choosing a path of green growth will create jobs, diversify economies, and make the region a better place for current and future generations. The

actions of policy makers today will shape the trajectory of economies and communities for decades to come.

In the late 1950s, an era when some Cold War allies still flew cast-off World War II propeller-driven bombers and fighters, Northrop seized on the need to deliver modern warplanes with modest maintenance requirements. The shapers of American foreign policy needed an economical way to give allies supersonic performance. The U.S. Air Force and Navy only tangentially used the F-5, but decades of new American fliers honed their skills on the similar T-38 variant, a high-performance training aircraft. The F-5, an all-out air superiority fighter, possesses remarkable performance to match its classy good looks. It has served U.S. allies (and a few former allies like Iran) for decades. Many still fly, including F-5Es, F-5Fs, and modified F-5Ns used by the U.S. Navy as aggressor training aircraft at its famous Top Gun school. The T-38 carries the sleek lines into the training world. And the powerful single-engine F-20, the ultimate iteration of this Northrop line, brought the basic F-5 premise forward into a new era. Vintage and modern photos in this WarbirdTech volume depict F-5s, T-38s, and the few F-20s in many guises; technical drawings and detail

photos show the inner workings. Declassified documents illuminate the story of USAF F-5s combat-tested in Vietnam. Color photos capture variations in camouflage and markings since 1959. The enduring story of the Northrop F-5 series and the aircraft it spawned is overdue and timely for an audience that increasingly seeks reliable information and photos about Cold War aircraft.
