This book asks: how do we explain this conflict? What are the implications of conflict for the ambitious economic development agendas of Indian governments? Based upon extensive field research in India's National Capital Region, this book is the first to focus on labour relations in the Indian auto industry. It proposes the theory that conflict in the auto industry has been driven by twin forces: first, the intersection of global networks of auto manufacturing with regional social structures which have always relied on informal and precariously-employed workers; and, second, the systematic displacement of securely-employed 'regular workers' by waves of precariously-employed 'de facto informal workers'. The concept of ‘ harmonization ’ has become very popular in China, with the Chinese government increasingly applying the term ‘ harmonious society ’ to internal affairs and the term ‘ harmonious world ’ to international relationships. Harmonization as both an end and a means of China ’ s development is deeply rooted in China ’ s cultural tradition, which emphasizes moderation, balance and harmony between human beings and nature, between different social groups, and between the Chinese and other nationalities. This book examines the experience of enacting the concept of harmonization in China in recent years. It explores this in terms of developments within Chinese society, economic developments and changes in business practices, environmental challenges and coping strategies, and changing patterns of international relations. Throughout, it discusses the gaps between rhetoric and reality, policy and practice.
