An apparently contradictory yet radically urgent collection of texts tracing the genealogy of a controversial current in contemporary philosophy. Accelerationism is the name of a contemporary political heresy: the insistence that the only radical political response to capitalism is not to protest, disrupt, critique, or détourne it, but to accelerate and exacerbate its uprooting, alienating, decoding, abstractive tendencies. #Accelerate presents a genealogy of accelerationism, tracking the impulse through 90s UK darkside cyberculture and the theory-fictions of Nick Land, Sadie Plant, Iain Grant, and CCRU, across the cultural underground of the 80s (rave, acid house, SF cinema) and back to its sources in delirious post-68 ferment, in texts whose searing nihilistic jouissance would later be disavowed by their authors and the marxist and academic establishment alike. On either side of this central sequence, the book includes texts by Marx that call attention to his own "Prometheanism," and key works from recent years document the recent extraordinary emergence of new accelerationisms steeled against the onslaughts of neoliberal capitalist realism, and retooled for the twenty-first century. At the forefront of the energetic contemporary debate around this disputed, problematic term, #Accelerate activates a historical conversation about futurity, technology, politics, enjoyment, and capital. This is a legacy shot through with contradictions, yet urgently galvanized today by the poverty of "reasonable" contemporary political alternatives.

Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

Unconventional heavy crude oils are replacing the conventional light crude oils slowly but steadily as a major energy source. Heavy crude oils are cheaper and present an opportunity to the refiners to process them with higher profit margins. However, the unfavourable characteristics of heavy crude oils such as high viscosity, low API gravity, low H/C ratio, chemical complexity with high asphaltenes content, high acidity, high sulfur and increased level of metal and heteroatom impurities impede extraction, pumping, transportation and processing. Very poor mobility of the heavy oils, due to very high viscosities, significantly affects production and transportation. Techniques for viscosity reduction, drag reduction and in-situ upgrading of the crude oil to improve the flow characteristics in pipelines are presented in this book. The heavier and complex molecules of asphaltenes with low H/C ratios present many technological challenges during the refining of the crude oil, such as heavy coking on

catalysts. Hydrogen addition and carbon removal are the two approaches used to improve the recovery of value-added products such as gasoline and diesel. In addition, the heavy crude oil needs pre-treatment to remove the high levels of impurities before the crude oil can be refined. This book introduces the major challenges and some of the methods to overcome them.

In "The Democracy of Objects," Levi R. Bryant presents a compelling exploration of object-oriented ontology (OOO), positing that all entities, regardless of their nature or scale, possess equal agency and significance. Bryant's literary style blends philosophical rigor with accessible language, making complex ideas in metaphysics and contemporary philosophy digestible to a broader audience. Contextually situated within the larger framework of speculative realism, the book challenges anthropocentric paradigms, inviting readers to reconsider the relationships between humans and non-human entities, thus offering a radical shift in how we perceive the material world. Levi R. Bryant, a prominent philosopher and a significant proponent of OOO, draws inspiration from a diverse array of philosophical traditions, including the works of Graham Harman and Quentin Meillassoux. His academic endeavors are focused on understanding the implications of a non-anthropocentric approach to being and existence. This foundational perspective not only informs his theoretical investigations but also drives the urgency of his arguments in "The Democracy of Objects," where he attempts to dismantle traditional

---

hierarchies of existence. This book is highly recommended for those intrigued by contemporary philosophy, environmental ethics, and the intersections of technology and society. Bryant's provocative insights serve as an essential guide for navigating the increasingly vital discourse around the agency of objects and the reconfiguration of our understanding of reality. Engage with this text to broaden your intellectual horizons and challenge conventional philosophical notions.
