Report of the Inspector of Factories
Excerpt from Operation of Machine Tools, Vol. 1: The Lathe The standard engine lathe, which is the type commonly used by machinists for doing general work, is one of the most important tools in a machine shop, because it is adapted to a great variety of work, such as turning all sorts of cylindrically shaped parts, boring holes, cutting threads,

etc. The illustration Fig. 1 shows a lathe which, in many respects, represents a typical design, and while some of the parts are arranged differently on other makes, the general construction is practically the same as on the machine illustrated.
