Why is Your Toyota Check Engine Light On?

Check Engine light comes on only when it's cold out. Hi. I have a 1998 Chevrolet Cavalier with a 2.2 liter 4 cylinder engine and an automatic transmission. When it's quite cold out, the "Check Engine" light comes on on my dash board. I phoned up a guy I take my car to for repairs, and he told me to bring the car to his place the following Monday. Over the weekend,

the Check Engine light went off, but I figure that the fault code would still be stored in the computer's memory, so I brought ...

That's because the Check Engine light comes to life if anything, and we do mean anything, isn't 100% under the hood. This means that you could be staring at a major repair, or your gas cap could be too loose (no kidding).

Unfortunately, the majority of recurrent Check Engine episodes eventually lead to some professional repair time.

## **4 Reasons Why Your Check Engine Light Came On**

If the engine oil level is low, this is causing the oil warning light  
to flicker. This is most likely what is responsible for the  
occasional flickering of the oil warning light. More specifically, a  
low oil level will cause the oil pressure inside the engine to  
temporarily drop. When this happens, the warning light will  
flicker.

**Service Engine Soon Light [How to fix it?] Meaning & Causes**

If your check engine light is on, you may have a defective O2 sensor that needs to be replaced. This engine component measures the amount of unburned oxygen in your exhaust system. If not replaced, this can lead to lower fuel-economy ratings, damaged spark plugs, a damaged catalytic converter and excess fuel burn.

**Can Check Engine Light Turn Itself Off? - YES**

Your Nissan check engine light should come on under normal operation when you insert the key in the ignition. After 5 seconds or once you start the

---

engine, the light should turn off as long as no fault codes are present. If the check engine light stays on, the problem can be something as simple as a loose gas cap or a faulty oxygen sensor.

*Check engine light comes on after I fill up my gas tank ...*

When it runs into an issue that the ECU cannot correct, the check engine light (CEL) starts glowing. The light is typically yellow or orange, and features an image of engine with text telling the driver to check or service the engine or powertrain. The engine computer stores a diagnostic code when the light begins glowing.

*Check Engine light comes on only when it's cold out ...*

The reason why the check engine light comes 'on' is because the car has failed some type of test. Whether that is a continuous monitor like misfires, or engine timing, or non continuous monitor like the catalyst or the EVAP system, or air fuel ratio. That kind of stuff. So, it runs all these tests and when it sees a problem, it fails the test.

*Engine Light Comes On When*

When your vehicle has a problem and your check engine light comes on, the On-Board Diagnostics (OBD) system in your vehicle will also trigger a code that can be used to diagnose what might be wrong. If you have access to an OBD-II scanner, feel free to search our database of common OBD-II trouble codes to help figure out what might be wrong.
