Juniper MX Series Springer Nature This book focuses on the emerging additive manufacturing technology and its applications beyond state-of-the-art, fibrereinforced thermoplastics. It also discusses the development of a hybrid, integrated process that combines additive and subtractive operations in a single-step platform, allowing CAD-to-Part production with freeform shapes using long or continuous fibre-reinforced thermoplastics. The book covers the entire value chain of this next-generation technology, from part design and materials composition to transformation stages, product evaluation, and end-of-life studies. Moreover, it addresses the following engineering issues: • Design rules for hybrid additive manufacturing; • Thermoplastic compounds for high-temperature and -strength applications; • Advanced

extrusion heads and process concepts; • Hybridisation strategies; • Software ecosystems for hAM design, preprocessing, process planning, emulating and multi-axis processing; • 3D path generators for hAM based on a multiobjective optimisation algorithm that matches the recent curved adaptive slicing method with a new transversal scheme; • hAM parameters, real-time monitoring and closed-loop control; • Multiparametric nondestructive testing (NDT) tools customised for FRTP AM parts; • Sustainable manufacturing processes validated by advanced LCA/LCC models. JUNOS Cookbook "O'Reilly Media, Inc." Why is there such fervent demand by enterprises and network service providers worldwide for the MX Series from Juniper Networks? One of the conspicuous characteristics of the northern dialects of Britain and Ireland is variation in verbal agreement, especially the use of plural verbal -s. Once a mark of a consistent, categorical grammatical system in the traditional dialects of the area, today verbal -s appears in highly complex, hybrid variation patterns in the modern vernaculars. This corpus-based study explores continuities and discontinuities between the dialects involved, and discusses the implications of such hybrid variable sytems for a usage-based theory of grammatical competence.

Implementing Health Care Information Systems Springer Nature

This series in Computers and Medicine had its origins when I met Jerry Stone of Springer-Verlag at a SCAMC meeting in 1982. We determined that there was a need for good collections of papers that would help disseminate the results of research and application in this field. I had already decided to do what is now Information Systems for Patient Care, and Jerry contributed the idea of making it part of a series. In 1984 the first book was published, andthanks to Jerry's efforts - Computers and Medicine was underway. Since that time, there have been many changes. Sadly, Jerry died at a very early age and cannot share in the success of the series that he helped found. On the bright side, however, many of the early goals of the series have been met. As the result of equipment improvements and the consequent lowering of costs, com puters are being used in a growing number of medical applications, and the health care community is very computer literate. Thus, the focus of concern has turned from learning about the technology to understanding how that technology can be exploited in a medical environment.
