Sometime in the twenty-first century the largest pharmaceutical company in the world, infiltrated by corrupt politicians and the military, assumes control of global politics. The company develops a drug that splits the human embryo in two, creating identical twins that are mirrors of each other - right down to voice patterns, fingerprints and personality. Longevity City depicts Lee, a young man who becomes involved in the revolution against the most important man in the world - Ronald Carver III - along with the cultural/socio-political background of the futuristic Earth they inhabit. Switching back and forth between Lee (and his twin, Max) and Carver's degenerate leadership of their twenty-second century world, it touches on contemporary issues such as the environment, the third world, and stem cell research. Ronald Carver III will do anything to maintain his hold over the masses, and Lee will do anything to stop him. Their personal battle ranges from earth to outer space, and as they come closer to a final, all-encompassing showdown, the fate of society - and of the entire planet itself - hangs in the balance. All in-house investigation is described to determine whether the industry- and military-standard oil change interval of 100 hours could be extended for DOD Family of Diesel Engine Driven Generator Sets using MIL-L-2104C specification lubricating oil. The investigation was conducted in two phases. In Phase I, the oil and filter were changed each 100 hours in accordance with the servicing and maintenance guide for the preproduction model 5,000-hour reliability and acceptance test. In Phase II, the oil and filter change interval was established by the condition of the oil. The condition of the oil was monitored by chemical and spectrometric analyses. Based on test results and the urgency of the current energy crisis, the Project Manager, Modile Electric Power, issued an interim oil change policy directing that the oil and oil filters be changed each 300 hours of engine running (normal running conditions) or after 6 months, whichever comes first. It is conservatively estimated that a savings in excess of \$1.5 million a year can be realized by the military with the implementation of this directive.
