The camshaft position sensor senses the piston position. The sensor system consists of a rotating part, typically a disc, as well as a static part, the actual sensor. When the engine is running, the

high and low parts of the teeth cause the gap with the sensor to change. The changing gap causes the magnetic field near the sensor to change.

Engine Coolant Temperature Sensor Fits HYUNDAI Getz TB ...

A fault code stored in the Engine Control Unit (ECU), explains what caused the check engine light to come on. If the ECU has detected a fault code and triggered the Check Engine Light (CEL) / Service Engine Light, don't necessarily assume that there is an engine problem. The problem could be an emission related problem and the car may drive fine.

Symptoms of a Bad Engine Coolant Temperature Sensor ...

Buddies, my Getz is failing. When accelerating, it does not exceed 2000 rpm and it seems as if the gearbox did not allow the engine to accelerate or develop. It feels as if the accelerator was released and pressed continuously. When setting it in neutral and accelerating, it works perfectly and revolutions raise without any problem.

The Camshaft Position Sensor is an electronic device used in an engine to record the rate at which the camshaft is spinning. This information is used by the Engine Control Module to control ignition and fuel injection. The camshaft position sensor senses the retraction of camshaft (intake) to identify a particular cylinder.

Hello, everyone. I have an automatic Hyundai Getz 2010 and I have recently changed its timing belt, spark plugs and filters, and maintained the injectors as well. The last few days, it has been having problems to start when cold. It was only after the second or third time of trying that the engine finally started working.

Hyundai Check Engine Light Troubleshooting Guide

The front heated oxygen sensor (or O2 sensor 1) is placed into the exhaust manifold. It detects the amount of oxygen in the exhaust gas compared to the outside air. The heated oxygen sensor 1 has a closed-end tube made of ceramic zirconia. The zirconia generates voltage from approximately 1V in richer conditions to 0V in leaner conditions.
