[| Cartech Home](#)

If the engine also sputters when the engine is idling but not while driving, in other words, it stops sputtering when you start driving or rev up the engine, then the problem is a bad valve. As indicated that the car sputters both when starting and at idle. But, when you start driving, the sputtering goes away, it smoothes out.

8 Reasons Why Your Car Engine is Sputtering &

Fixes ...

When the car is idling in neutral or with clutch fully engaged the engine sputters, kind of revs and then drops. It doesn't die, and when the accelerator is engaged even a little, or I have the car in any gear, there are no issues. Also having the A/C on makes it sputter significantly less, sometimes not at all.

Car Starts but Engine Sputters While Starting | Cartech Home

When you start the car from a cold start it'll idle in the low 800-900 rpms, rev up a few

times into 1100-1200 then idle fine at 1000rpms. or just die out. After that it runs perfectly fine. If you start it up and drive, it chugs, sputters, backfires, you can push the gas pedal to the floor and it does no good. Engine Sputters At Idle - perks.flicharge.com
When a car sputters as it idles, this means the car is either not getting enough power or fuel. To test the problem, the driver presses down on the gas peddle. If doing so makes the car stop sputtering, there is a problem with fuel delivery. If this does not help, there is a problem with the power supply.
