What should the oil temperature be on a Harley Davidson v-twin. I have a 2007 Road Gide and just got one of those cool digital oil temperature thermometers for father;s day. When it is around 90 degrees outside, my oil temperature is around 255 degrees. Is that right, or is that too hot. Since I never had a thermometer before, I have no idea what the engine or oil temperature normally is.

ET sensor ,As glider said it is a single sensor located on your front cylinder head,the sensor provides input signals to the ECM as it reacts to the tempeture of the front cylinder head, the ECM uses this signals from the sensor to determine if the engine is at operating tempeture or warming up from cold start. this is just one part of the ...
Bad Temp Sensor... | V-Twin Forum
Actual engine temp with the bike running measured in the heads (Where the new temp sensor is located on the Sportster which gives a higher reading than on big twins because of this location) usually gives a running temp in the range of 290-320. Keep in mind that the temp reading on the metric bike comparison was not engine temp but coolant temp.

temp sensor? | Harley Davidson Forums
That's the cyl head temp sensor. I've been chasing a small gremlin that shows similar symtoms as yours. The other day I went over just about everything on my bike and pulled the boot off the head temp sensor to make sure it was still tightend in there. The thing looked brand new but who knows.
