Paradoxes of internationalization deals with British and German trade union responses to the internationalization of corporate structures and strategies at Ford and General Motors between the late 1960s and the early twenty-first century. The book is based on research in numerous archives in Britain, Germany and the United States. The book points to the paradoxical effects of internationalization processes. First, it demonstrates how internationalization reinforced trade unions' national identities and allegiances. Second, the book highlights that internationalization made domestic trade union practices more similar in some respects, while it simultaneously contributed to the re-creation of diversity between and within the two countries. Third, the book shows that investment competition was paradoxically the most important precondition for the emergence of cross-border cooperation initiatives. The book will be of interest to academics and students in a range of disciplines from comparative industrial relations, to international political economy, business studies and transnational history.

Vauxhall cars have been central to motoring in Britain for over a century. The company built a formidable reputation in its early years with notable machines like the Prince Henry, the 30/98 and the 1914 Grand Prix cars, and then moved into a more mainstream area of the market, remaining in the forefront of innovation during the 1930s. The post-1945 years saw the company as one of the foremost in Britain, catering for family needs with cars like the Velox, the Cresta, and the Victor, and then building the highly successful Viva range of smaller models. Closely aligned with its German cousin, Opel, Vauxhall relied increasingly on Opel's designs after the mid-1970s. Astra, Cavalier, Nova and Carlton were among the best-loved cars of their era, and no-one can forget the giant-killing 176mph Lotus Carlton. This illustrated introduction explores the history of Vauxhall cars from its beginning in 1903 to the city cars and SUVs that have led the Vauxhall product lines, as the company continues to excel in the twenty-first century.

This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

There is now a practically universal consensus that our climate is changing rapidly, and as a direct result of human activities. While there is extensive debate about what we can do to mitigate the damage we are causing, it is becoming increasingly clear that a large part of our resources will have to be directed towards adapting to new climatic conditions, with talk of survivability replacing sustainability as the new and most pressing priority. Nowhere is this more evident than in the built environment -- the stage on which our most important interactions with climatic conditions are played out.
