This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.

Paradoxes of internationalization deals with British and German trade union responses to the internationalization of corporate structures and strategies at Ford and General Motors between the late 1960s and the early twenty-first century. The book is based on research in numerous archives in Britain, Germany and the United States. The book points to the paradoxical effects of internationalization processes. First, it demonstrates how

internationalization reinforced trade unions' national identities and allegiances. Second, the book highlights that internationalization made domestic trade union practices more similar in some respects, while it simultaneously contributed to the re-creation of diversity between and within the two countries. Third, the book shows that investment competition was paradoxically the most important precondition for the emergence of cross-border cooperation initiatives. The book will be of interest to academics and students in a range of disciplines from comparative industrial relations, to international political economy, business studies and transnational history.

Vauxhall cars have been central to motoring in Britain for over a century. The company built a formidable reputation in its early years with notable machines like the Prince Henry, the 30/98 and the 1914 Grand Prix cars, and then moved into a more mainstream area of the market, remaining in the forefront of innovation during the 1930s. The post-1945 years saw the company as one of the foremost in Britain, catering for family needs with cars like the Velox, the Cresta, and the Victor, and then building the highly successful Viva range of smaller models. Closely aligned with its German cousin, Opel, Vauxhall relied increasingly on Opel's designs after the mid-1970s. Astra, Cavalier, Nova and Carlton were among the best-loved cars of their era, and no-one can forget the giant-killing 176mph Lotus Carlton. This illustrated introduction explores the history of Vauxhall cars from its beginning in 1903 to the city cars and SUVs that have led the

A St. Andrews golf course is the site of a grisly discovery in this Scottish crime thriller. Murder. It's the only word in a note clutched by the dismembered hand found on the lush green of a golf course in St. Andrews, Scotland. When DCI Andy Gilchrist learns the note is addressed to him, he realizes the thing he feared most has come to pass: A killer is deliberately targeting him. Though Gilchrist has plenty of experience solving

murders, this time he's overwhelmed by a flood of seemingly unconnected crises—not only the note found in the victim's hand, but his son's missing girlfriend, his ex-wife's failing health, and his boss's decision to pair Gilchrist up with a sleazy detective from his past. Worse, the hand turns out to be just the beginning, and soon he's faced with relentless parade of body parts . . .

In recent years there have been dramatic changes in the public perception of gasoline, or petrol, mainly as a result of concern about the environment. This has necessitated changes in the composition of the fuel itself, such that modified fuel is now mandatory in certain parts of the USA. These reduced-emission fuels have now reached Europe and elsewhere. Motor Gasoline provides the latest information on the legislation and technology involved for oil companies producing motor fuel, while looking at the implications for the industry and the benefits for the environment. It also looks at possible alternatives to fuels for spark ignition engines, the importance of which will grow as environmental pressure increases, and oil reserves are exhausted. Motor Gasoline should be read by all students of fossil fuel and other energy resources, as well as oil workers, engineers and environmentalists. It will also provide an enlightening read for anyone concerned about the ecological effects of the oil and car industries, amongst the most environmentally significant of all humanity's activities.

It was brash and it was loud - the 1980s put paid to the glumness of the '70s and nowhere was that more obvious than in the cars we

drove, which took a quantum leap in durability, performance, equipment and style. They had to: Japanese quality and European design were luring away ever more customers. Features such as fuel injection, turbochargers, computer-controlled systems and four-wheel drive became commonplace. This was also the decade that brought us the people-carrier and the off-roader, new classes of car that radically reshaped family transport. Meanwhile, seatbelt-wearing became law, the M25 opened, speed cameras appeared and ram-raiding was the new motoring nemesis. Relive everything car-related in Britain in the 1980s with Giles Chapman.

This book chronicles the life of Keith Duckworth OBE, the remarkable engineer famous for being co-founder of Cosworth Engineering and creating the most successful F1 engine of all time, the DFV. Although the company's engines are given due prominence, this isn't an intricate technical examination of their design, but a more rounded look at the life and work of their designer - work which included significant contributions to aviation, motorcycling, and powerboating.
