Hispanic Engineer &
Information Technology is a

publication devoted to science and technology and to promoting opportunities in those fields for Hispanic Americans. US Black Engineer & IT McGraw Hill Professional While there is a lot of appreciation for backend and distributed systems challenges, there tends to be less empathy for why mobile development is hard when done at

scale. This book collects challenges engineers face when building iOS and Android apps at scale, and common ways to tackle these. By scale, we mean having numbers of users in the millions and being built by large engineering teams. For mobile engineers, this book is a blueprint for modern app engineering approaches. For non-mobile engineers and managers, it is a resource with which to build empathy and appreciation for the complexity of world-class mobile engineering. The book covers iOS and Android mobile app challenges on these dimensions:

Challenges due to the unique nature of mobile applications compared to the web, and to the backend. App complexity challenges. How do you deal with increasingly complicated navigation patterns? What about non-deterministic event combinations? How do you localize across several languages, and how do you scale your automated and manual tests?

Challenges due to large engineering teams. The larger the mobile team, the more challenging it becomes to ensure a consistent architecture. If

your company builds multiple apps, how do you balance not rewriting everything from scratch while moving at a fast pace, over waiting on "centralized" teams?

Cross-platform approaches. The tooling to build mobile apps keeps changing. New languages, frameworks, and approaches that all promise to address the pain points of mobile engineering keep appearing. But which approach should you choose? Flutter, React Native, Cordova? Native apps? Reuse business logic written in Kotlin, C#, C++ or other languages? What engineering approaches do "world-class" mobile engineering teams choose in non-functional aspects like code quality, compliance, privacy, compliance, or with experimentation, performance, or app size?

I Started college in 1964

when computers were in their infancy. As the first class of Boomers to start

college I jumped into computers and rode them my whole career on a technological leap in history. One of my first courses was computer programming in Fortran IV. In the beginning, knowing how to use a computer was virtually synonymous with knowing how to program one. Later Iowa State University received one of the first IBM 360 computers and I completed my statistics course using punch cards. In my first job at Alcoa I met my first wife where she would type my letters and enter errorless data onto punch tapes for data transmission to our time-sharing computers at headquarters in Pittsburg. As my career progressed at Johnson & Johnson, computers were necessary tools to my success as a manager. I utilized PERT (program and evaluation review technique) to introduce new national products and production facilities. My first success was OB tampons. My Texas success was key to my transfer and promotion to I.E. manager at the Personal Products Division in Wilmington Ill. We were tasked with a national introduction in only 90 days. That product was Care Free Panty shields. Next I learned BASIC language, invented by John G. Kemeny and Thomas E. Kurtz of Dartmouth College. The two math professors deeply believed that computer literacy would be essential and designed the language. Its name stood for "Beginner's All-Purpose Symbolic Instruction Code". I utilized BASIC

programming language to simulate our Division's business models. The business models created quarterly what-if budget models. Those software models were transitioned into a real-time hour-by-hour production floor network of computers. Ten years after my BS degree I was moved for my sixth city transfer to Silicon Valley in San Jose, California, the home of technology, to continue my third career at Gould Biomation. First we implemented IBM's COPICS MRP to manage our dynamic new product development. Gould Biomation introduced the first digital logic analyzer bi-passing Techtronic's and surprising Hewlett Packard. We became the most profitable division of Gould Inc. and I was promoted to Director of Manufacturing at age 38. In 1979, John moved to California to become the manufacturing and engineering manager for Gould Biomation. In 1982, he was promoted to director of manufacturing. Over the next twenty years, John continued managing manufacturing for multiple Silicon Valley start-up companies. After retiring from engineering, John volunteered his time at Independence High School, which offered its students courses in aircraft construction. He was soon hired as a math teacher for the East Side Union High School and Campbell Union High School Districts, where he taught all levels of high school math for the next eleven years. Engineer, entrepreneur, raconteur, and high school teacher, John

has led a full and rich life. But the one part of life that he holds close to his heart is flying as a hobby. John is the founder of Experimental Aircraft Association (EAA) Ultralight Chapter 110 Inc., and is a past president of Flying Aces, Inc. He has regularly flown to Oshkosh, WI for the national EAA week. John has lived in San Jose CA for the past 37 years, and is married to Valerie Schaefer, his much-loved and valued partner. Resumes for Scientific and Technical Careers McGraw-Hill Companies Even within the nursing field, there are a wide variety of positions, and this book shows samples of resumes and cover letters that have worked. This title will be a valuable resource to nursing professionals who seek clinical nursing

or administrative positions. Newly minted nurses and newcomers to the field will learn how to show off their clinical rotations to best advantage. Nurses often change fields, too, and the book includes resumes of nurses who have successfully transitioned into pharmaceutical sales and other areas. A bonus of this book is that it includes samples of paperwork involved in getting federal government jobs: specialized resumes and the federal "resumix" as well as the write-ups for the Knowledge, Skills and Abilities (KSAs) which are often required for government positions. This book will show nurses how to maximize their career potential, get federal nursing positions,

and change fields if they want to. (This is the 25th title in PREP's Real-Resumes Series.)

In my first few years as a developer I assumed that hard work was all I needed. Then I was passed over for a promotion and my manager couldn't give me feedback on what areas to improve, so I could get to the senior engineer level. I was frustrated; even bitter: not as much about missing the promotion, but because of the lack of guidance. By the time I became a manager, I was

engineers reporting to me with the kind of feedback and support I wish I would have gotten years earlier. And I did. While my team tripled over the next two years, people became visibly better engineers, and this progression was clear from performance reviews and promotions. This book is a summary of the advice I've given to software engineers over the years – and then some more. This book follows the structure of a “typical” career path for a software engineer, from starting out as a fresh-faced software developer, through being a role model senior/lead, all the way to the staff/principle/distinguished level. It summarizes what I've learned as a developer and how I've approached coaching engineers at different stages of their careers. We cover “soft” skills which become increasingly important as your seniority increases, and the “hard” parts of the

job, like software engineering concepts and approaches which help you grow professionally. The names of levels and their expectations can – and do! – vary across companies. The higher “tier” a business is, the more tends to be expected of engineers, compared to lower tier places. For example, the “senior engineer” level has notoriously high expectations at Google (L5 level) and Meta (E5 level,) compared to lower-tier companies. If you work at a higher-tier business, it may be useful to read the chapters about higher levels, and not only the level you’re currently interested in. The book is composed of six standalone parts, each made up of several chapters: Part 1: Developer Career Fundamentals Part 2: The Competent Software Developer Part 3: The Well-Rounded Senior Engineer Part 4: The Pragmatic Tech Lead Part 5: Role Model Staff and Principal Engineers Part 6: Conclusion Parts 1 and 6

apply to all engineering levels, from entry-level software developer, to principal-and-above engineer. Parts 2, 3, 4, and 5 cover increasingly senior engineering levels and group together topics in chapters, such as “Software Engineering,” “Collaboration,” “Getting Things Done,” etc. Naming and levels vary, but the principles of what makes a great engineer who is impactful at the individual, team, and organizational levels, are remarkably constant. No matter where you are in your career, I hope this book provides a fresh perspective and new ideas on how to grow as an engineer. Praise for the book “From performance reviews to P95 latency, from team dynamics to testing, Gergely demystifies all aspects of a software career. This book is well named: it really does feel like the missing guidebook for the whole industry.” – Tanya Reilly, senior principal engineer and author of *The Staff Engineer's Path*

"Spanning a huge range of topics from technical to social in a concise manner, this belongs on the desk of any software engineer looking to grow their impact and their career. You'll reach for it again and again for sage advice in any situation." – James Stanier, Director of Engineering at Shopify, author of
