Highly effective thinking is an art that engineers and scientists can be taught to develop. By presenting actual experiences and analyzing them as they are described, the author conveys the developmental thought processes employed and shows a style of thinking that leads to successful results is something that can be learned. Along with spectacular successes, the author also conveys how failures contributed to shaping the thought processes. Provides the reader with a style of thinking that will enhance a person's ability to function as a problem-solver of complex technical issues. Consists of a collection of stories about the author's participation in significant discoveries, relating how those discoveries came about and, most importantly, provides analysis about the thought processes and reasoning that took place as the author and his associates progressed through engineering problems.

Engineering Science is a comprehensive textbook suitable for all vocational and pre-degree courses. Taking a generic approach, the essential scientific principles engineering students need for their studies are presented topic by topic. Unlike the majority of texts available on this subject, Bill Bolton goes beyond the core science to include the mechanical, electrical and electronic principles needed in the majority of courses. A concise and accessible text is supported by numerous worked examples and problems, with a complete Answer Section at the back of the book. Now in its fifth edition, the text has been fully updated in line with the current BTEC National syllabus and includes a grid mapping the chapters to the BTEC units. The breadth of coverage means this fifth edition will also prove an essential reference for students embarking on HNC and Foundation Degrees, who require a general introduction to this subject area. New for this edition is online lecturer support available from <http://textbooks.elsevier.com> and featuring: • Key points, definitions and equations from the book for use as handouts • Multiple Choice Questions • Answers to the Multiple Choice Questions • PowerPoint slides featuring essential illustrations per topic area for use in lectures or as handouts

Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.
