Over the most recent couple of years, the importance of undergraduate technical education has grown amid a huge industrial revolution in our country. More refined and recently discovered super-specific topics are being introduced instead of old ones while modifying the course curriculum. In the new course curriculum, more noteworthy accentuation is laid on the basic science subjects and, on the need, to develop in-depth knowledge about the fundamentals of any particular area of academic interest. Keeping all this in mind, and utilizing my long experience as a teacher in a technical college under a technical university, I have ventured to write this book titled, Engineering Chemistry Laboratory Manual. In this book, all experiments are explained as per the JNTU syllabus for the first-year students of B.Tech. These are supplemented with theoretical explanations followed by procedure description, tabulation, calculation, sample calculation, and finally a series of possible viva-voce questions and their answers relating to that experiment. This book will certainly help all B.Tech./B.E. students to do well in their viva voce while completing their experiments cum examinations. It will also serve as a textbook in Chemistry practical examinations for any student in the laboratory. I sincerely hope that this book will receive full appreciation from both students and teachers.

I begin writing this book when I thought to share my experience with everyone. I tried to explain the Engineering college life for all those who want to take admission in Engineering college or who are interested to know about the Engineering college life. I have shared my experience of hostel life including fun with friends, hostel ragging, mess food and many more. Apart from study, there is one more side of engineering college that is about girlfriend. I have written the story related to one group of friends. It's about three friends Rajith, Sandeep & Anamika, how they join need the college, how they become friends & how the love story begins. So read this story & find out what happened with this couple...?

The U.S. Department of State charged the Academies with the task of producing a protocol for development of standard operating procedures (SOPs) that would serve as a complement to the Chemical Laboratory Safety and Security: A Guide to Prudent Chemical Management and be included with the other materials in the 2010 toolkit. To accomplish this task, a committee with experience and knowledge in good chemical safety and security practices in academic and industrial laboratories with awareness of international standards and regulations was formed. The hope is that this toolkit expansion product will enhance the use of the previous reference book and the accompanying toolkit, especially in developing countries where safety resources are scarce and experience of operators and end-users may be limited.
