Henry Petroski's previous

bestsellers have delighted readers

with intriguing stories about the

engineering marvels around us,

from the lowly pencil to the soaring

suspension bridge. In this book,

Petroski delves deeper into the

mystery of invention, to explore

what everyday artifacts and

sophisticated networks can reveal

about the way engineers solve

problems. Engineering entails more

than knowing the way things work.

What do economics and ecology,

aesthetics and ethics, have to do

with the shape of a paper clip, the

tab of a beverage can, the cabin

design of a turbojet, or the course

of a river? How do the

idiosyncrasies of individual

engineers, companies, and

communities leave their mark on

projects from Velcro® to fax

machines to waterworks? Invention

by Design offers an insider's look at

these political and cultural

dimensions of design and development, production and construction. Readers unfamiliar with engineering will find Petroski's enthusiasm contagious, whether the topic is the genesis of the Ziploc baggie or the averted collapse of Manhattan's sleekest skyscraper. And those who inhabit the world of engineering will discover insights to challenge their customary perspective, whether their work involves failure analysis, systems design, or public relations. Written with the flair that readers have come to expect from his books, *Invention by Design* reaffirms Petroski as the master explicator of the principles and processes that turn thoughts into the many things that define our made world.

Engineering Drawing is a textbook designed for the students of all engineering disciplines to develop a spatial bent of mind to observe, visualize, and understand the structure of objects from different perspectives. This ability forms the central idea of design and development of all engineering products. Beginning with the basics, such as BIS conventions, geometrical constructions, and scales, the book presents a detailed chapter on Visualization Concepts and Freehand Sketching, which lays the foundation to understand the subsequent chapters on orthographic projections, projection of points, lines, planes, and solids.

These chapters ease the complexity of understanding further chapters such as intersection of solids, surfaces, and development of surfaces. The last few chapters discuss isometric projections, transformation of projections, perspective projections, and finally computer-aided drafting that briefs the reader about the utility of AutoCAD 2015 tools in drawing. The book provides a number of example problems, step-by-step procedure for solutions, numerous graded practice exercises, and multiple-choice questions.

Computer Aided Engineering Graphics : (As Per The New Syllabus, B. Tech. I Year Of U.P. Technical University) S. Chand Publishing

This volume presents a solid fundamental treatment of engineering graphics, geometry and modeling suitable for engineers and technologists. It reflects the most modern drafting procedures from the fundamentals (for the beginner), to techniques and practices of drawing in specialized fields. This book is an Engineering Drawing Book, named Fundamentals of Engineering Drawing- Scales where author has given complete detail about the topic that is not easily found in general books. Author believes that chapters should have completeness of information which in most cases is compromised to procure a light weight and affordable book by publishing and book should be written separately with lucid and easy to learn content. Also complete Engineering Drawing book will have around 20 chapters and area specific syllabus is limited to only 6 -12 chapters out of 20 chapters that means it is a waste of money buying a book with loads of content that is not useful. Also Youtube video lecture of this book is available for free for the buyers of the book. This volume presents a solid fundamental

treatment of engineering graphics, geometry and modeling suitable for engineers and technologists. It reflects the most modern drafting procedures from the fundamentals (for the beginner), to techniques and practices of drawing in specialized fields.
