This is a collection of soundings into various aspects of the history of maritime labor from the close of the Middle Ages to the present. The spatial emphasis of the essays is north European and Atlantic since they deal with the countries around the North Sea and Baltic with some coverage of North America. Indeed, from time to time the authors leave the sea behind in order to examine

broader issues such as labor markets, the regulation and institutions of seafaring, and industrial relations on the waterfront. But at all points there is a common theme of sea-related labor, and a common objective of better understanding what have often been perceived as difficult and elusive groups of people.

This book is Designed for the students of Engineering and Technology as well as specially for Mechanical Engineering Degree and Diploma students. The teaching of this course faces difficulty in explaining the various concept of machine drawing viz., orthographical projection, sectioning, complicated mechanical assembly drawing etc. Sometimes explanation requires some three dimensional and complicated drawing to be drawn on the black board which is quite impossible due to the time constraint of class. This book is an outcome of the strong need felt by students offering the course and the teaching need felt by us. The teacher can explain the related concepts, drawing methods and uses of various parts being drawn etc. in each practical class without bothering the black board. The subject matter has been compressed from the view point of Mechanical Engineering students. The book also contains Basic Drawing Softwares which describes about the basics of Auto-CAD, CATIA, PROE, ANSYS

etc. which is useful for today's need of Engineering & Technology.
