international discussions on investment, trade, and technology policy. They take into account the globalization of industrial activity and the special characteristics of high-technology industries while recognizing the continued policy role of national governments. The book identifies the rationale for promotional measures for high-technology industries, delineates sources of friction among the leading industrial countries, and proposes policies to enhance international cooperation and strengthen the multilateral trading regime. This volume also examines the factors driving collaboration among otherwise competing firms and national programs, highlights the need to

develop principles of equitable public and private international cooperation, and emphasizes the linkage between investment, government procurement, and other trade policies and prospects for enhanced international cooperation.

**The Theory of Economic Development of Backward Areas with Special Reference to the Virgin Islands of the United States** National Academies Press

The untold story of how America once created the most successful economy the world has ever seen and how we can do it again. The American economy glitters on the outside, but the reality is quite different. Job opportunities and economic growth are increasingly concentrated in a few

---

crowded coastal enclaves. Corporations and investors are disproportionately developing technologies that benefit the wealthiest Americans in the most prosperous areas -- and destroying middle class jobs elsewhere. To turn this tide, we must look to a brilliant and all-but-forgotten American success story and embark on a plan that will create the industries of the future -- and the jobs that go with them. Beginning in 1940, massive public investment generated breakthroughs in science and technology that first helped win WWII and then created the most successful economy the world has ever seen. Private enterprise then built on these breakthroughs to create new industries -- such as radar, jet engines, digital computers, mobile

telecommunications, life-saving medicines, and the internet-- that became the catalyst for broader economic growth that generated millions of good jobs. We lifted almost all boats, not just the yachts. Jonathan Gruber and Simon Johnson tell the story of this first American growth engine and provide the blueprint for a second. It's a visionary, pragmatic, sure-to-be controversial plan that will lead to job growth and a new American economy in places now left behind. Good Economics for Hard Times National Academies Press  
The Sandia National Laboratories asked the Board on Science, Technology, and Economic Policy (STEP) to hold a one-day symposium to review Sandia's proposal to develop a science and technology park. In light of the

---

importance of industry-laboratory cooperation for the STEP Board's project on Government-Industry Partnerships for the Development of New Technologies, the Board convened a workshop bringing together executive branch officials, congressional staff, representatives from the private sector, and regional economists to discuss the Sandia S&T park initiative. The Sandia S&T Park, which Sandia National Laboratories, the City of Albuquerque, and the State of New Mexico are jointly developing, is a 285 acre site located adjacent to Sandia National Laboratories. Groundbreaking for the park took place in May, 1999.

The successful conclusion of the US-EU Agreement on Science and Technology Cooperation offers the prospect of a new chapter in transatlantic cooperation. As with any international agreement in science and technology, the accord's full potential will be realized only if it can encourage mutually beneficial cooperation. With this in mind, responsible officials of the European Union (EU) and the U.S. government contacted the National Research Council's Board on Science, Technology, and Economic Policy (STEP) to discuss how this negotiating success might

---

be publicized and productively exploited. It was agreed that the STEP Board should organize a conference to celebrate the accord, inform the U.S. and European research communities of the agreement, and explore specific opportunities for enhanced cooperation. At the same time, the conference would provide the occasion to review existing and evolving areas of transatlantic cooperation in science and technology from the perception of the United States, the European Commission, and the member states of the European Union.

As information service management becomes increasingly critical in the 1980s, its attention is no longer limited to the acquisition, indexing, and storage of documents.

Instead, it is taking on an expanded role in the understanding and analysis of economic issues and the management of technological innovation. This collection defines the dimensions of this expanded role and suggests strategies for improved information service management. Three principal areas related to information policy and decision making are covered: economics and government policy, management and marketing of services, and innovations and the impacts of technology. The book provides a practical and comprehensive background and framework for librarians, students of information science, information center managers, and others who are concerned with effective management of information services.

The winners of the Nobel Prize show how economics, when done right, can help us solve the thorniest social and political problems of our day. Figuring out how to deal with today's critical economic problems is perhaps the great challenge of our time. Much greater than space travel or perhaps even the next revolutionary medical breakthrough, what is at stake is the whole idea of the good

---

life as we have known it. Immigration and inequality, globalization and technological disruption, slowing growth and accelerating climate change--these are sources of great anxiety across the world, from New Delhi and Dakar to Paris and Washington, DC. The resources to address these challenges are there--what we lack are ideas that will help us jump the wall of disagreement and distrust that divides us. If we succeed, history will remember our era with gratitude; if we fail, the potential losses are incalculable. In this revolutionary book, renowned MIT economists Abhijit V. Banerjee and Esther Duflo take on this challenge, building on

cutting-edge research in economics explained with lucidity and grace. Original, provocative, and urgent, *Good Economics for Hard Times* makes a persuasive case for an intelligent interventionism and a society built on compassion and respect. It is an extraordinary achievement, one that shines a light to help us appreciate and understand our precariously balanced world.

The granting of offsets to promote exports of major aircraft systems has been a source of significant controversy. Critics believe that offsets undermine the U.S. manufacturing base; lead to the transfer of

---

commercial technology, possibly affecting national security; and result in the loss of high-wage jobs. Defenders of the practice argue that offsets are a fact of commercial life and can result in net U.S. job gains. In an effort to focus the offsets debate on analytical issues, the White House National Economic Council asked the National Research Council to convene expert academicians, representatives from the aerospace industry, and top government officials to discuss the impact of offsets on the U.S. economy. To ensure a rigorous discussion encompassing all points of view, the conference included a series of papers outlining the positions of key participants. This resulting volume offers a comprehensive and up-to-

date analysis of the impact of aerospace offsets. *Official Congressional Directory* Government Printing Office  
Directory includes directory information for Congress, including officers, committees, and Congressional advisory boards, commissions and other groups, and legislative agencies; for the Executive branch including the Executive office of the president, each Cabinet agency, independent agencies, commissions and boards; for the Judiciary; for the government of the District of Columbia; for selected international organizations; for foreign diplomatic Offices in the United States; and for the Congressional press galleries. Includes also a short statistical section and Congressional district maps.

*The Administration of Correspondence-study Departments of Universities and Colleges* National Academies Press

Small businesses have increasingly been recognized as a source of innovation, and one way in which the Federal government encourages such innovation is through the Small Business Innovation Research program. SBIR sets aside 2.5 percent of federal agencies' R&D budgets for R&D grants to small business. Although the program's budget was nearly \$1.2 billion in 1998, SBIR has been subject to relatively little outside review. As part of the STEP's ongoing project on Government-Industry Partnerships, the Board convened policymakers, academic researchers, and representatives from small

business to discuss the program's history and rationale, review existing research, and identify areas for further research and program improvements.
