Relevance of geology to civil
engineering Most civil
engineering projects involve
some excavation of soils and
rocks, or involve loading the
Earth by building on it. In
some cases, the excavated
rocks may be used as
constructional material, and
in others, rocks may form a
major part of the finished
product, such as a motorway
cutting or the site for a
reservoir.

THE GEOLOGICAL ENVIRONMENT
Earth is an active planet in

a constant state if change. Geological processes continually modify the Earth's surface, destroy old rocks, create new rocks and add to the complexity of ground conditions. Cycle of Geology encompasses all the major processes, which must be cyclic, or they would grind to an inevitable halt.
