Thermal radiation is radiation that things make because they are warm. It may be felt as heat or seen as light. It is a form of heat transfer that is moved from one place to another by

electromagnetic radiation waves or rays. It does not require a form of matter to be transferred.. For example a person in front of a fire can warm up because of the light of the fire, even if the air is cold.

Kapuno and M. M. Rathore ...

Being in Mechanical Engineering, one of our course of studies is Heat Transfer. The author does a great job describing the three modes of heat transfer: conduction, convection, and radiation. There are areas that could be described better, such as shape factors and the Heisler charts, but overall a good book.
