On the other hand, a variety of formulae are used in different branches of applied mathematics just on the basis of structural analogy. In the present work, we suggest a scheme to classify the merit of an analogy and also present several examples to this effect from both pure and applied mathematics.

We provide an introduction to the field of functional representation and reasoning from an engineering point of view. Our main goals are to: (i) present and clarify the notion of function with the aim of unifying diverse perspectives, (ii) identify the various current approaches to represent function, and (iii) highlight the potential of functional reasoning for engineering applications.
