Frontiers of Engineering is the fifth book highlighting the presentations of the National Academy of Engineering's (NAE) annual symposium series, Frontiers of Engineering. The 1999 NAE Symposium on Frontiers of Engineering was held October 14-16, at the Academies' Beckman Center in Irvine, California. The 101 emerging engineering leaders (ages 30-45) from industry, academia, and federal laboratories who attended the meeting heard presentations and discussed cutting-edge research and technical work in four engineering fields. Symposium speakers were asked to prepare extended summaries of their presentations,

and it is those papers that are contained here. The intent of this book, and of the four that precede it in the series, is to describe the content and underpinning philosophy of this unique meeting and to highlight some of the exciting developments in engineering today.

Both sides of the engineering equation--education and utilization--are studied in this unique volume. A brief discussion of the development of engineering in the United States is followed by an examination of the status of engineering today. A specially developed flow diagram, which defines all aspects of the current engineering community, demonstrates how the profession adapts and responds to change. The book then takes a critical look at the strengths and weaknesses of current engineering and evaluates major trends in the composition of the engineering work force. The final section offers a preview of engineering

and its environment in the year 2000. Companion volumes in the Engineering Education and Practice in the United States series listed below discuss specific issues in engineering education.
