This manual is the culmination of more than 35 years of skeletal analysis, teaching forensic anthropology and conducting skeletal research at universities and museums in the U.S., Asia, Pacific, Africa, and Europe. While there are many illustrated human osteology and anatomy books available to students and professionals, there is none that approaches the topic of identifying and siding human bones quite like *The Bone Book*, with its large, annotated color photographs and easy-to-follow steps. Designed for use in either the lab or the field, the book covers the material from top to bottom—from cranium to metatarsals and phalanges—with the help of more than 400 vivid, full-color photographs, clearly annotated to highlight key features. Complex bones, such as the cranium, are shown in multiple photos (including several “exploded” or disarticulated skulls, showing how the complex bones fit together). In addition to the photos, the book offers easy-to-follow instructions and mnemonic tips that guide the reader, step by step, through the process of identifying every individual bone and which side of the body it came from. *The Bone Book* can be used as a stand-alone reference or as a companion to other sources.

Although most of the photos show adult bones, the book also includes helpful photos of subadult bones and even fetal bones, which some forensic cases involve. *The Bone Book* will contribute to filling a gap in identifying and siding bones more easily and, in that sense, add to the body of anthropological, anatomical, and medical literature. It will be useful to anthropology students, anatomists, surgeons, medical examiners, and others working with the human skeleton.
