To insure that the engineering procedures and standards used in the appraisal of county roads will be practical and conservative, geared to Iowa's economy and local

conditions in the counties, the Automotive Safety Foundation selected, and the President of the County Engineers Association arranged for the services of an engineering advisory

committee composed of seven County Engineers. In addition, the State Highway Commission's Secondary Road Engineer and one of the Iowa Division Bureau of Public Roads, District Engineers sit in on Advisory Committee meetings in an ex officio capacity. This committee has assisted in the development of policies and engineering procedures outlined in this manual and will continue to advise the Foundation during the course of the study. Similarly, a State Engineering Advisory Committee and a City Engineering Advisory Committee have been named to assist in the preparation of procedures and standards for appraisal of State highways and

city streets, respectively. The County Engineer in each county is responsible for the engineering appraisal of all roads under the jurisdiction of his county in accordance with procedures and instructions set forth in this manual. In addition, County Engineers are asked to cooperate with smaller municipalities, within their counties, as in the appraisal of city streets. Many small municipalities do not have professional or technical personnel to make an engineering appraisal. Each mayor has been advised, and his municipality may engage consultants or make arrangements with the County Engineer to have the appraisal completed. Each County Engineer will be furnished a Municipal Procedure

Manual and work sheets. This manual of engineering procedures insures that the purpose and objectives of the county road appraisal are understood and followed in a uniform manner. Members of the Engineering Office of the Study Committee will visit as many counties as possible during the course of the work to review progress and offer assistance.

documentation. If an individual, therefore, wishes to simplify the end users' ability to set up or enhance their engineering documentation requirements. Companies with small manual systems to large-scale mass production facilities can use this handbook to tailor their engineering documentation requirements

or company wishes to create or improve an engineering documentation system, there is no need to start from scratch. Instead, use this new handbook, complete with 47 specially designed forms and procedures that cover every major aspect of a comprehensive

engineering documentation system. Another book published by Noyes, *Engineering Documentation Control Handbook* can be very helpful if used in conjunction with this handbook. This book contains 62 engineering procedures and 27 forms. Most of these engineering procedures are influenced by the

author's background in aircraft, aerospace, and the computer industry. The manufacture of Printed Circuit Boards was used as an example throughout the book. However, the principles are applicable to all engineering and operational disciplines. Manual of Engineering Procedure and

Standards for Determining the Needs of the Rhode Island State Highway System Elsevier Design Engineering Manual offers a practical guide to the key principles of design engineering. It features a compilation of extracts from several books within the range of Design Engineering books in the Elsevier collection. The book is organized into 11 sections. Beginning with a review of the processes of

product development and design, the book goes on to describe systematic ways of choosing materials and processes. It details the properties of modern metallic alloys including commercial steels, cast irons, superalloys, titanium alloys, structural intermetallic compounds, and aluminum alloys. The book explains the human/system interface; procedures to assess the risks associated with job and task

characteristics; and environmental factors that may be encountered at work and affect behavior. Product liability and safety rules are discussed. The final section on design techniques introduces the design process from an inventors perspective to a more formal model called total design. It also deals with the behavior of plastics that influence the application of practical and complex engineering equations and

analysis in the design of products. Provides a single-source of critical information to the design engineer, saving time and therefore money on a particular design project. Presents both the fundamentals and advanced topics and also the latest information in key aspects of the design process. Examines all aspects of the design process in one concise and accessible volume. *Manual of Engineering*
