### **Environmental Science Chapter 3&4 Flashcards | Quizlet**

Biodiversity hotspots are areas that support natural ecosystems that are largely intact and where native species and communities associated with these ecosystems are well represented. They are also areas with a high diversity of locally endemic species, which are species that are not found or are rarely found outside the hotspot.

### **BiodiversityHotspotsWebquestforAPES.docx (1).pdf - AP ...**

All of the following characterize biodiversity hotspots EXCEPT: many are located in isolated mountain or island ecosystems. they are rich in endemic species. they contain endemic generalist species that can adapt readily to environmental disturbances. many are in tropical regions where biodiversity is plentiful.
