REA's AP Environmental
Science Crash Course is the
first book of its kind for the last-
minute studier or any AP
student who wants a quick
refresher on the course.

/Written by an AP
Environmental Science
teacher, the targeted review
chapters prepare students for
the test by only focusing on the
important topics tested on the
AP Environmental Science
exam. /The easy-to-read
review chapters in outline
format cover everything AP
students need to know for the
exam: human population
dynamics, managing public
lands, energy conservation,
changes in Earth's climate,

species extinction, loss of
biodiversity, and more. The
author also includes must-know
key terms all AP students
should know before test day.
/With our Crash Course,
students can study the subject
faster, learn the crucial
material, and boost their AP
score all in less time. The
author provides key strategies
for answering the multiple-
choice questions, so students
can build their point scores and
get a 5!

Environmental Science: Foundations and

Applications Macmillan
Now a National Bestseller!
Climate change is real but
it's not the end of the world.
It is not even our most
serious environmental
problem. Michael
Shellenberger has been
fighting for a greener planet
for decades. He helped save
the world's last unprotected
redwoods. He co-created the
predecessor to today's
Green New Deal. And he led
a successful effort by climate

scientists and activists to keep
nuclear plants operating,
preventing a spike of
emissions. But in 2019, as
some claimed "billions of
people are going to die,"
contributing to rising anxiety,
including among adolescents,
Shellenberger decided that,
as a lifelong environmental
activist, leading energy
expert, and father of a
teenage daughter, he needed
to speak out to separate
science from fiction. Despite
decades of news media
attention, many remain
ignorant of basic facts.
Carbon emissions peaked and
have been declining in most
developed nations for over a
decade. Deaths from extreme
weather, even in poor
nations, declined 80 percent
over the last four decades.
And the risk of Earth
warming to very high
temperatures is increasingly
unlikely thanks to slowing
population growth and
abundant natural gas.

Curiously, the people who are the most alarmist about the problems also tend to oppose the obvious solutions. What's really behind the rise of apocalyptic environmentalism? There are powerful financial interests. There are desires for status and power. But most of all there is a desire among supposedly secular people for transcendence. This spiritual impulse can be natural and healthy. But in preaching fear without love, and guilt without redemption, the new religion is failing to satisfy our deepest psychological and existential needs.

Why Environmental Alarmism Hurts Us All Princeton Review

ENVIRONMENTAL SCIENCE inspires and equips students to make a difference for the world. Featuring sustainability as their central theme, authors Tyler Miller and Scott Spoolman emphasize natural capital, natural capital degradation, solutions, trade-offs, and the importance of individuals. As a result, students learn how nature works, how they interact with it, and how humanity has sustained and can continue to sustain its relationship with the earth by applying nature's lessons to economies and individual lifestyles. Engaging features like Core Case Studies, and Connections boxes demonstrate the relevance of issues and encourage critical thinking. Updated with new learning tools, the latest content, and an enhanced art program, this highly flexible book allows instructors to vary the order of chapters and sections within chapters to meet the needs of their courses. Two new active learning features conclude each chapter. Doing Environmental Science offers project ideas based on chapter content that build critical thinking skills and integrate scientific method principles. Global Environmental Watch offers online learning activities through the Global Environment Watch website, helping students connect the book's concepts to current real-world issues.

This is the third of four volumes from the Committee to Review the Outer Continental Shelf (OCS) Environmental Studies Program (ESP). The first two dealt with physical, oceanographic, and ecological aspects of the program. This book presents the findings of the panel's investigation of the social and economic relevance of OCS

oil and gas activities and the social and economic aspects of the ESP. It describes the potential effects of OCS activities on the human environment, presents an ideal socioeconomic studies program, and comments on the current program in the Atlantic, Gulf of Mexico, Pacific, and Alaska regions.
