Why Environmental Alarmism Hurts Us All

Princeton Review

This is the third of four volumes from the Committee to Review the Outer Continental Shelf (OCS) Environmental Studies Program (ESP). The first two dealt with physical, oceanographic, and ecological aspects of the program. This book presents the findings of the panel's investigation of the social and economic relevance of OCS oil and gas activities and the social and economic aspects of the ESP. It describes the potential effects of OCS activities on the human environment, presents an ideal socioeconomic studies program, and comments on the current program in the Atlantic, Gulf of Mexico, Pacific, and Alaska regions.

Environmental Science National Academies Press

In the new edition of *LIVING IN THE ENVIRONMENT*, authors Tyler Miller and Scott Spoolman continue to work with the National Geographic Society in developing a text designed to equip students with the inspiration and knowledge they need to make a difference in solving today's environmental issues. Using sustainability as the integrating theme, *LIVING IN THE ENVIRONMENT*, 19th Edition, provides clear introductions to the multiple environmental problems that we face and balanced discussions to evaluate potential solutions. New Core Case Studies for 11 of the book's 25 chapters bring important real-world stories to the forefront; new questions added to the captions of figures that involve data graphs give students additional practice evaluating data; and a new focus on learning from nature includes coverage of principles and applications of biomimicry in most chapters. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Environmental Science Princeton Review

Now a National Bestseller! Climate change is real but it's not the end of the world. It is not even our most serious environmental problem. Michael Shellenberger has been fighting for a greener planet for decades.

He helped save the world's last unprotected redwoods. He co-created the predecessor to today's Green New Deal.

And he led a successful effort by climate scientists and activists to keep nuclear plants operating, preventing a spike of emissions. But in 2019, as some claimed "billions of people are going to die," contributing to rising anxiety, including among adolescents, Shellenberger decided that, as a lifelong environmental activist, leading energy expert, and father of a teenage daughter, he needed to speak out to separate science from fiction.

Despite decades of news media attention, many remain ignorant of basic facts.

Carbon emissions peaked and have been declining in most developed nations for over a decade. Deaths from extreme weather, even in poor nations, declined 80 percent over the last four decades. And the risk of Earth warming to very high temperatures is increasingly unlikely

thanks to slowing population growth and abundant natural gas. Curiously, the people who are the most alarmist about the problems also tend to oppose the obvious solutions. What's really behind the rise of apocalyptic environmentalism? There are powerful financial interests. There are desires for status and power. But most of all there is a desire among supposedly secular people for transcendence. This spiritual impulse can be natural and healthy. But in preaching fear without love, and guilt without redemption, the new religion is failing to satisfy our deepest psychological and existential needs.

Created for non-majors courses in environmental science, environmental studies, and environmental biology, *Environmental Science: Foundations and Applications* emphasizes critical thinking and quantitative reasoning skills. Students learn how to analyze graphs, measure environmental impact on various scales, and use simple calculations to understand key concepts. With a solid understanding of science fundamentals and how the scientific method is applied, students are able to evaluate information objectively and draw their own conclusions. The text equips students to interpret the wealth of data they will encounter as citizens, professionals, and consumers.
