"It may be that I
have stumbled upon an
adequate description
of life itself."
These modest yet
profound words
trumpet an imminent
paradigm shift in
scientific, economic,
and technological
thinking. In the
tradition of
Schrödinger's classic
What Is Life?,
Kauffman's

Investigations is a
tour-de-force
exploration of the
very essence of life
itself, with
conclusions that
radically undermine
the scientific
approaches on which
modern science
rests--the approaches
of Newton, Boltzman,
Bohr, and Einstein.
Building on his
pivotal ideas about
order and evolution
in complex life
systems, Kauffman
finds that classical
science does not take
into account that
physical
systems--such as
people in a
biosphere--effect
their dynamic
environments in
addition to being
affected by them.

These systems act on
their own behalf as
autonomous agents,
but what defines them
as such? In other
words, what is life?
Kauffman supplies a
novel answer that
goes beyond
traditional
scientific thinking
by defining and
explaining autonomous
agents and work in
the contexts of
thermodynamics and of
information theory.
Much of
Investigations
unpacks the
progressively
surprising
implications of his
definition.
Significantly, he
sets the stages for a
technological
revolution in the
coming decades.

Scientists and engineers may soon seek to create autonomous agents--both organic and mechanical--that can not only construct things and work, but also reproduce themselves! Kauffman also lays out a foundation for a new concept of organization, and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos. Moreover, he presents four candidate laws to explain how autonomous agents co-create their biosphere and the startling idea of a "co-creating" cosmos. A showcase of Kauffman's most fundamental and significant ideas, *Investigations* presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself--on this planet and anywhere

else in the cosmos. *Deep Learning for Coders with fastai and PyTorch* Pearson Scott Foresman The Common core state standards for mathematics are a set of expectations and skills that students need to master to succeed in college and the real world. *BarCharts' Math Common core* series aligns with those specific standards to help guide students through their classes. Deep learning is often viewed as the exclusive domain of math PhDs and big tech companies. But as this hands-on guide demonstrates, programmers comfortable with Python can achieve impressive results in deep learning with little math background, small amounts of data, and minimal code. How? With fastai, the first library to provide a consistent interface to the most frequently used deep learning applications. Authors Jeremy Howard and Sylvain Gugger, the creators of fastai, show you how to train a model on a wide range of tasks using fastai and PyTorch. You ' ll also dive progressively further into deep learning theory to gain a complete understanding of the algorithms behind the scenes. Train models in computer vision, natural language processing, tabular data, and collaborative filtering Learn the latest deep learning techniques that matter most in practice Improve accuracy, speed, and reliability by understanding how deep learning models work Discover how to turn your models into web

applications Implement deep learning algorithms from scratch Consider the ethical implications of your work Gain insight from the foreword by PyTorch cofounder, Soumith Chintala
