"It may be that I have stumbled upon an adequate description of life itself." These modest yet profound words trumpet an imminent paradigm shift in scientific, economic, and technological thinking. In the tradition of Schrödinger's classic *What Is Life?*, Kauffman's *Investigations* is a tour-de-force exploration of the very essence of life itself, with conclusions that radically undermine the scientific approaches on which modern science rests--the approaches of Newton, Boltzman, Bohr, and Einstein. Building on his pivotal ideas about order and evolution in complex life systems, Kauffman finds that classical science does not take into account that physical systems--such as people in a biosphere--effect their dynamic environments in addition to being affected by them. These systems act on their own behalf as autonomous agents, but what defines them as such? In other words, what is life? Kauffman supplies a novel answer that goes beyond traditional scientific thinking by defining and explaining autonomous agents and work in the contexts of thermodynamics and of information theory. Much of *Investigations* unpacks the progressively surprising implications of his definition. Significantly, he sets the stages for a technological revolution in the coming decades. Scientists and engineers may soon seek to create autonomous agents--both organic and mechanical--that can not only construct things and work, but also reproduce themselves! Kauffman also lays out a foundation for a new concept of organization, and explores the requirements for the emergence of a general biology that will transcend terrestrial biology to seek laws governing biospheres anywhere in the cosmos. Moreover, he presents four candidate laws to explain how autonomous agents co-create their biosphere and the startling idea of a "co-creating" cosmos. A showcase of Kauffman's most fundamental and significant ideas, *Investigations* presents a new way of thinking about the fundamentals of general biology that will change the way we understand life itself--on this planet and anywhere else in the cosmos.

Studies of teachers in the U.S. often document insufficient subject matter knowledge in mathematics. Yet, these studies give few examples of the knowledge teachers need to support teaching, particularly the kind of teaching demanded by recent reforms in mathematics education. *Knowing and Teaching Elementary Mathematics* describes the nature and development of the knowledge that elementary teachers need to become accomplished mathematics teachers, and suggests

why such knowledge seems more common in China than in the United States, despite the fact that Chinese teachers have less formal education than their U.S. counterparts. The anniversary edition of this bestselling volume includes the original studies that compare U.S. and Chinese elementary school teachers' mathematical understanding and offers a powerful framework for grasping the mathematical content necessary to understand and develop the thinking of school children. Highlighting notable changes in the field and the author's work, this new edition includes an updated preface, introduction, and key journal articles that frame and contextualize this seminal work.

Engage Every Learner with enVisionMATH Developing your child's math skills requires a comprehensive curriculum for homeschooling, and enVisionMATH is just that system. Each Grade of enVisionMATH is designed to be interactive and engaging, having children complete activities and learn through visual aids. Grade 3 continues right where Grade 2 left off, ensuring your child experiences a smooth transition from one level to the next. enVisionMATH: Grade 3 will help you plan lessons that introduce math concepts in an easy-to-follow and step-by-step way. Your child will use the visual aids provided by the curriculum materials to formulate a strong math foundation. As you instruct, enVisionMATH: Grade 3 will supply your child with problems that solidify his or her understanding of the concept you introduced. Furthermore, the structure of enVisionMATH is designed to help your child develop strong problem-solving skills that he or she can apply in math and other subjects. By the time your child finishes the Grade 3 math homeschool program, he or she will be able to: Understand and use fractions. Add using numbers up to 1,000. Understand the differences and relationship between multiplication and division - for instance, 100 divided by two is the same as 50 times two. Find the area of a shape by multiplying its sides. Categorize shapes based on number of sides (i.e., triangles, quadrilaterals and hexagons). Identify arithmetic patterns. Use graphs to solve math problems and understand data sets. enVisionMATH caters to children who have visual and kinesthetic learning styles. The graphs and pictures help your child conceptualize math visually while the numerous activities and quizzes allow him or her to practice each new idea. Grade 3 is full of opportunities for you to explain math concepts in different ways, ensuring your child fully grasps the lesson. For more information on the numerous components that come with enVisionMATH: Grade 3, take a look at the Features and Benefits page.
