technology, color management, and tone reproduction. Popular Photography Indiana University Press Computer science and economics have engaged in a lively interaction over the past fifteen years, resulting in the new field of algorithmic game theory. Many problems that are central to modern computer science, ranging from resource allocation in large networks to online advertising, involve interactions between multiple self-interested parties. Economics and game theory offer a host of useful models and definitions to reason about such problems. The flow of ideas also travels in the other direction, and concepts from computer science are increasingly important in economics. This book grew out of the author's Stanford University course on algorithmic game theory, and aims to give students and other newcomers a quick and accessible introduction to many of the most important concepts in the field. The book also includes case studies on online advertising, wireless spectrum auctions, kidney exchange, and network management. Popular Photography National Geographic Books Destined to take its place

among the great classics of nature photography, this comprehensive book is devoted to the extraordinary discipline and special techniques of capturing magnificent birds on film. 200 color illustrations.

What do we mean by the term "animation" when we are discussing film? Is it a technique? A style? A way of seeing or experiencing "a world" that has little relation to our own lived experience of "the world"? In *Animated Worlds*, contributors reveal the astonishing variety of "worlds" animation confronts us with. Essays range from close film analyses to phenomenological and cognitive approaches, spectatorship, performance, literary theory, and digital aesthetics. Authors include Vivian Sobchack, Richard Weihe, Thomas Lamarre, Paul Wells, and Karin Wehn.
