Giant Oil and Gas Fields of the Decade, 1990-1999 Springer Nature

In an age of skepticism and disenchantment, people long for something that satisfies our mind's search for truth and our heart's desire for beauty

and meaning. Stand Firm: Apologetics and the Brilliance of the Gospel argues that the gospel satisfies both of these needs. It is true and rational, but it is also inherently attractive and provides meaning and purpose. In short, the gospel is brilliant. It is brilliant, in one sense, because of the broad variety of evidences for its truth. But it is also brilliant given its beauty, goodness and the meaningful life it offers. The book provides up to date responses to questions about the existence of God, the reliability of the Bible, Jesus and the resurrection, and the problem of evil. It also treats unique topics such as understanding truth, knowledge and faith, the claims of alternate faiths, religious disagreement, etc. Each chapter attempts to connect these considerations with the gospel so that we may stand firm in our faith.

Aiden From the second I saw her, I knew she'd be my ruin. Sitting all alone at the bar, she looked like an angel. Eurydice in human form; her beauty eclipsed by demons. Now, I'm one of them. The ghost she's tried for years to escape. Thinking I wouldn't be able to find her. But I never stopped trying, and now that I have, her past sins should be the least of her worries. Riley From the moment he saw me, I knew I'd ruin his life. Alone at the bar, I dared the monster to come and play. Orpheus in the flesh, with his sad songs and strange obsessions. I became one of them. The siren who calls to the darkest parts of him. Only, I disappeared before he could act on it. But now he's here, and he wants me to repent for my sins. *** *Vipers and Virtuosos is a full-length, standalone dark rockstar romance inspired by the myth of Orpheus and Eurydice. It is NOT fantasy, historical, or a retelling. If you are not a dark romance reader, this book may not be suitable for you. Reader discretion is advised.

Apologetics and the Brilliance of the Gospel John Wiley & Sons

We are facing a global energy crisis caused by world population growth, an escalating increase in demand, and continued dependence on fossil-based fuels for generation. It is widely accepted that increases in greenhouse gas concentration levels, if not reversed, will result in major changes to world climate with consequential effects on our society and economy. This is just the kind of intractable problem that Purdue University's Global Policy Research Institute seeks to address in the Purdue Studies in Public Policy series by promoting the engagement between policy makers and experts in fields such as engineering and technology. Major steps forward in the development and use of technology are required. In order to achieve solutions of the required scale and magnitude within a limited timeline, it is essential that engineers be not only technologically-adept but also aware of the wider social and political issues that policy-makers face. Likewise, it is also imperative that policy makers liaise closely with the academic community in order to realize advances. This book is designed to bridge the gap between these two groups, with a particular emphasis on educating the socially-conscious engineers and technologists of the future. In this accessibly-written volume, central issues in global energy are

discussed through interdisciplinary dialogue between experts from both North America and Europe. The first section provides an overview of the nature of the global energy crisis approached from historical, political, and sociocultural perspectives. In the second section, expert contributors outline the technology and policy issues facing the development of major conventional and renewable energy sources. The third and final section explores policy and technology challenges and opportunities in the distribution and consumption of energy, in sectors such as transportation and the built environment. The book's epilogue suggests some future scenarios in energy distribution and use. Le Monde de l'éducation Understanding the Global Energy Crisis

The Federal Highway Administration (FHWA), American Association of State Highway and Transportation Officials (AASHTO), and the National Cooperative Highway Research Program (NCHRP) sponsored an international technology scan to learn what actions are being taken in Europe to address habitat and wildlife issues. A delegation of federal, State, and conservation group representatives visited Slovenia, Switzerland, Germany, France, and the Netherlands to observe and document efforts in Europe. As a result of the trip, the team formed conclusions and recommendations for U.S. applications in the areas of policy, communications, guidance manuals, and research.

This highly acclaimed atlas distills the vast science of climate change, providing a reliable and insightful guide to this rapidly growing field. Since the 2006 publication of the first edition, climate change has climbed even higher up the global agenda. This new edition reflects the latest developments in research and the impact of climate change, and in current efforts to mitigate and adapt to changes in the world's weather. The atlas covers a wide range of topics, including warning signs, vulnerable populations, health impacts, renewable energy, emissions reduction, personal and public action. The third edition includes new or additional coverage of a number of topics,

including agreements reached in Copenhagen and Cancun, ocean warming and increased acidity, the economic impact of climate change, and advantages gained by communities and business from adapting to climate change. The extensive maps and graphics have been updated with new data, making this edition once again an essential resource for everyone concerned with this pressing subject.

This book provides an updated and expanded overview of basic concepts of energy economics and explains how simple economic tools can be used to analyse contemporary energy issues in the light of recent developments, such as the Paris Agreement, the UN Sustainable Development Goals and new technological developments in the production and use of energy. The new edition is divided into four parts covering concepts, issues, markets, and governance.

Although the content has been thoroughly revised and rationalised to reflect the current state of knowledge, it retains the main features of the first edition, namely accessibility, research-informed presentation, and extensive use of charts, tables and worked examples. This easily accessible reference book allows readers to gain the skills required to understand and analyse complex energy issues from an economic perspective. It is a valuable resource for students and researchers in the field of energy economics, as well as interested readers with an interdisciplinary background.

Access to the Internet is an increasing problem in many areas of the world. As the popularity and usefulness of the Internet increases on a daily basis, lack of access to the technology is putting many groups at a disadvantage in terms of better education, better jobs and even in terms of higher levels of civic participation. However, creating a network infrastructure to serve outlying communities and sectors of the population is not straight-forward. This book brings together all the aspects of the problem – technical, regulatory and economic - into one volume to provide a comprehensive resource. It describes the latest technological advances that allow cost-effective network infrastructures to be built, and places them in the context of the applications and services that the infrastructure will deliver. A section on business models and case studies from North American and Europe demonstrate that the solutions are economically and practically viable. This book is essential for anyone looking to gain an understanding of the issues and technology surrounding the access debate. It will be of particular relevance to network engineers/designers/planners at the incumbent operator companies charged with delivering broadband access to as yet unconnected regions. Governments and regulatory bodies will also find this a useful guide to the problems that they may face.

Climate change is occurring. It is very likely caused by the emission of greenhouse gases from human activities, and poses

significant risks for a range of human and natural systems. And these emissions continue to increase, which will result in further change and greater risks. America's Climate Choices makes the case that the environmental, economic, and humanitarian risks posed by climate change indicate a pressing need for substantial action now to limit the magnitude of climate change and to prepare for adapting to its impacts. Although there is some uncertainty about future risk, acting now will reduce the risks posed by climate change and the pressure to make larger, more rapid, and potentially more expensive reductions later. Most actions taken to reduce vulnerability to climate change impacts are common sense investments that will offer protection against natural climate variations and extreme events. In addition, crucial investment decisions made now about equipment and infrastructure can "lock in" commitments to greenhouse gas emissions for decades to come. Finally, while it may be possible to scale back or reverse many responses to climate change, it is difficult or impossible to "undo" climate change, once manifested. Current efforts of local, state, and private-sector actors are important, but not likely to yield progress comparable to what could be achieved with the addition of strong federal policies that establish coherent national goals and incentives, and that promote strong U.S. engagement in international-level response efforts. The inherent complexities and uncertainties of climate change are best met by applying an iterative risk management framework and making efforts to significantly reduce greenhouse gas emissions; prepare for adapting to impacts; invest in scientific research, technology development, and information systems; and facilitate engagement between scientific and technical experts and the many types of stakeholders making America's climate choices.
