Unlike epithelial tissue, connective tissue typically has cells scattered throughout an extracellular matrix. In vertebrates, the most common type of connective tissue is loose connective tissue. It holds organs in place and attaches epithelial tissue to other underlying tissues.

Epithelial Tissue Yahoo Answers

When you consider that the respiratory system includes the tip of your nose, it includes all the tissues. But we can still find all the tissues when we just look at the lungs. The four tissues of the human body are connective, muscle, nervous, and epithelial. Epithelial is found at the site of gas exchange at the alveoli.
