Artists' books have emerged over the last 25 years as the quintessential contemporary art form, addressing subjects as diverse as poetry and politics, incorporating a full spectrum of artistic media and bookmaking methods, and taking every conceivable form. Female painters, sculptors, calligraphers, and printmakers, as well as a growing community of hobbyists, have played a primary role in developing this new mode of artistic expression. The Book as Art presents more than 100 of the most engaging women's artist books created by major fine artists such as Meret Oppenheim, May Stevens, Kara Walker, and Renee Stout and distinguished book artists such as Susan King, Ruth Laxson, Claire Van Vliet, and Julie Chen. The goal of the work reported in this dissertation is to develop methods for the acquisition and reproduction of high quality digital color images. To reach this goal it is necessary to understand and control the way in which the different devices involved in the entire color imaging chain treat colors. Therefore we addressed the problem of colorimetric characterization of scanners and printers, providing efficient and colorimetrically accurate means of conversion between a device-independent color space such as the CIELAB space, and the device-dependent color spaces of a scanner and a printer.
