With the popularity of digital photography growing by leaps and bounds over the last decade, some say film has been dying a slow death ever since – or is already dead. The reality is that film has never gone away, and in recent years has experienced a surging, renewed popularity – sometimes simply for its retro, analog status, but mostly for film's ability to create a look and feel that many believe digital can still not achieve. If anyone can

attest to this, it's Utah photographer Jonathan Canlas, who exclusively shoots with film, and has both an extremely successful wedding photography business as well as a series of popular workshops held numerous times per year around the world. In *Film Is Not Dead: A Digital Photographer's Guide to Shooting Film*, Canlas teams up with co-author Kristen Kalp to open the doors for anyone who wants to begin—or return to—shooting film. Casual, irreverent, fun, inspiring, and beautiful, this unique 10x8 hardcover book teaches the reader the basics of film, cameras, and shooting in this medium. Whether it's discussing the different tone and color characteristics of different films (Kodak, Fuji, etc.), how to load a medium-format camera back, how to create proper exposures, how and where to get film processed, or how Jonathan uses fun, plastic cameras like the Holga in his commercial and personal work, *Film Is Not Dead* appeals to anyone who is searching to finally begin creating that film look, but until now hasn't known where to start.

The Film Developing Cookbook is an up-to-date manual for modern film development techniques. While the original *Darkroom Cookbook* focused entirely on photographic chemicals and formulae, this book concentrates on films, their characteristics, and the developers each requires for maximum control of the resulting image. *The Film Developing Cookbook* specifically addresses the difficult subject of T-grain film development. It includes rarely found information on film development and the nature of film developers. The authors take bold and controversial stances on many widely accepted film developing dogmas. They tackle many of the widely accepted "myths" of

film development. They reject the trend toward 'scientific evaluation' of films and developers in favor of the photographer developing a personal aesthetic without relying exclusively on densitometry or H&D curves. Steve Anchell is a contributing editor to *Outdoor Photographer* and *PhotoWork* magazines. He has written columns, feature articles, and interviews for *Camera & Darkroom*, *View Camera*, *PIC*, *Shutterbug*, *Photo Shopper*, and *PhotoPro* magazines. His previous two books with Focal Press, *The Darkroom Cookbook* and *The Variable Contrast Printing Manual* are photography best-sellers. Steve's photographs have been exhibited in galleries and are shown in private collections. He photographs and prints both color and black-and-white with 35mm, 21 / 4 and large-format cameras. He has conducted over 80 photographic and darkroom workshops since 1979. Steve is currently the program director for the *Photographer's Formulary Workshops* in Condon, Montana. In early 1998, the first collection of his personal work, entitled *The Nude at Big Sur*, will be published by Whitefish Editions.
