Archie 3000 Conran Lovelace provides an introduction to Ada 95, one of the most widely used programming languages in the world. Although the reader is assumed to have a basic understanding of programming, no prior exposure to Ada is assumed and all the basics of the language are covered. The book comprises eighteen chapters each of which is composed of short sections designed to cover a small number of key concept and to provide a test question to check the reader's understanding of the concepts covered. Each chapter then concludes with a small quiz to help ensure that the reader has grasped the principles covered in the chapter. One of Ada 95's new features, its object-oriented facilities, is covered in depth, and all of the essential features of Ada programming are covered thoroughly. In Ada 95 significant

enhancements were also added to Ada's ability to interface with other programming languages (such as C, Fortran, and Cobol) and these are covered in one chapter. As a result both students and professional programmers learning Ada for the first time will welcome this new text.

After spending more than thirty years behind the lens—working for National Geographic, Time, Life, and Sports Illustrated—Joe McNally knows about light. He knows how to talk about it, shape it, color it, control it, and direct it. Most importantly, he knows how to create it...using small hot shoe flashes. In The Hot Shoe Diaries, Joe brings you behind the scenes to candidly share his lighting solutions for a ton of great images. Using Nikon Speedlights, Joe lets you in on his uncensored thought process—often funny, sometimes serious, always fascinating—to demonstrate how he makes his pictures with these small flashes. Whether he's photographing a gymnast on the Great Wall, an alligator in a swamp, or a fire truck careening through Times Square, Joe uses these flashes to create great light that makes his pictures sing.

The first practical guide to linking business strategy with the art and science of user experience and online design It has becoming increasingly clear that the big winners in the E-business arena are those that practice customer-centric design. While there are a multitude of good books on the

art and science of user interface and website design, until Built For Use, there were none that focused on user experience from the corporate strategist's and marketing manager's perspectives. Drawing upon her work as a user-experience strategist for numerous Fortune 1,000 firms, Karen Donoghue explores the dynamics of business strategy and user experience in a concise, jargon-free manner for nontechnical managers. With the help of fascinating and instructive before-and-after case studies, she helps managers become fluent in the language of user-experience; identifies user-experience and designstrategy best practices; explains how to determine what customers want; and much more.
