Historical wooden architecture is one of the most unique types of heritage built. Built from organic material, wooden buildings remain in harmony with the natural environment and fascinate future generations with its special charm. Because of its

uniqueness, wooden buildings reflect the richness of traditional building solutions developed in different parts of the world. At the same time, this type of building contains the spiritual values ??that were important to those who built these architectural structures. The main topics of 'Authenticity in Preserving Historical Wooden Architecture - Problems and Challenges' are: (i) The method of protection and preservation of wooden buildings as a form of specific historical interpretation; (ii) The question of reconstruction and translocation of a wooden historical building with regard to the level of authenticity; (iii) The analysis of the essence of historical changes

and the methods for maintaining and displaying wooden structures in relation to the requirements that determine their historical and architectural authenticity. Showing a variety of aspects of authenticity of wooden buildings, all demonstrated by specific examples (case studies), 'Authenticity in Preserving Historical Wooden Architecture - Problems and Challenges' presents practical implementations of theoretical findings. Hence, the book contributes to the understanding of wooden architectural heritage from a new perspective. The book will be of particular interest to academics and professionals interested in or involved in the preservation of built wooden

heritage .

At the cross Christ made possible a "divine exchange" for everyone who believes in him. What is this exchange? Because Jesus endured all the evil due to humankind, believers can actually partake in all the good due to him. In this meaty book, acclaimed scholar Derek Prince explores the astounding results of the atonement for followers of Christ. In place of punishment, wounding, death, poverty, shame, and rejection, Christ freely offers forgiveness, healing, life, abundance, glory, and acceptance. In addition, Prince gives biblical grounding for five areas of deliverance that are made available through the cross: deliverance from this present evil age, from the law, from self, from the flesh, and from the world.

Reaching net zero emissions will not be the end of the climate struggle, but only the end of the beginning. For centuries thereafter, temperatures will remain elevated;

climate damages will continue to accrue and sea levels will continue to rise. Even the urgent and utterly essential task of reaching net zero cannot be achieved rapidly by emissions reductions alone. To hasten net zero and minimize climate damages thereafter, we will also need massive carbon removal and storage. We may even need to reduce incoming solar radiation in order to lower unacceptably high temperatures. Such unproven and potentially risky climate interventions raise mind-blowing questions of governance and ethics. Pandora's Toolbox offers readers an accessible and authoritative introduction to both the hopes and hazards of some of humanity's most controversial technologies, which may nevertheless provide the key to saving our world.

This eBook edition of "The Higher Learning in America" has been formatted to the highest digital standards and adjusted for readability on all devices. Thorstein Veblen (1857-1929) was an American economist and sociologist. He is well known as a witty critic of capitalism. Veblen is famous for the idea of "conspicuous consumption." Conspicuous consumption, along with "conspicuous leisure," is performed to demonstrate wealth or mark social status. Veblen explains the concept in his best-known book, The Theory of the Leisure Class. Within the history of economic thought, Veblen is considered the leader of the institutional economics movement. Veblen's distinction between "institutions" and "technology" is still called the Veblenian dichotomy by contemporary economists. In the beginning of his

academic career Veblen had difficulties obtaining a university position, whether because he was discriminated for being Norwegian, or openly identified as an agnostic. These difficulties later inspired him to write The Higher Learning in America. In this book he claimed that true academic values were sacrificed by universities in favor of their own self-interest and profitability.
